REQUIEM TO MARY.

WRITTEN FOR THE SATURDAY EVENING POST.

"Whom the gods love, die young."

To what far land beyond our mortal seeing
Has thy soul wearied, and left our dimmer light,
Pale from the glamour of thy radiant being,
As if a star had left the brow of night?

What accept in the bright all-radiant shores,
Has sent thee from the strong but binding sense?
Broken in every bond of human loves—
Thou hastest to more our lowly atmosphere.

Lonely the sunbeam sob among yonder the grave
Hopeless and cold thou whose sympathy
And the dear one that dwelt under gave
Has made a shadow behind pall for them.

Oh, what an emptiness thou hast wrought
In the new chaos, where it gave and was dell,
Free from the cumbrous of earth's control on,
To the bright azure soaring unclouded.

All those dear hours and delights the house
That once thy presence lived with joy and mirth
Now the loved ones thy absence maketh bare,
Neither in rainbow round nor cloud nearer.

And be thy spirit as a prayer is given
That from the mourners' hearts ascend to thee
There came a response unto all every Godhead,
And with wings folded, bended down and said
Cast back a parting eye on all who sorrow
Went upward—and they tell us Mary dead!

Kennett Chester County. L.

VIRGINIA AND MAGDALENE;

OR,

THE FOSTER SISTERS.

A WINTER EVENING'S STORY.

(CONTINUED.)

WRITTEN FOR THE SATURDAY EVENING POST, BY EMMA D. E. N. SOUTHWORTH, AUTHOR OF "THE DESERTED WIFE," "SHANNONDALE," "RETRIBUTION," &c., &c., &c.

[Entered according to the Act of Congress, by Mrs. Emma D. E. N. Southworth, in the Clerk's Office of the District Court for the Eastern District of Pennsylvania.]

CHAPTER III.

INDIAN BLOOD.

He stood on his and the [illegible] Indian stranger
How like they looked! [illegible] expression was the same!
Suddenly [illegible] with a little change.
In the [illegible] dark and [illegible] Blood.
Fire [illegible] and [illegible] Indian.
He [illegible] blood [illegible] his father's face.
Proud [illegible] and [illegible] in his face.
Byron.

"Now, then, tell me that since you left me this morning, you have been nowhere but to the terrace of Prospect Hall, and the forest, and thence home."

"I am doing it! I am looking at you now, and I tell you that I have been nowhere since I left you this morning, except to the terrace of the hall, and the forest, and home!" said Magdalene, with unfaltering tone, and unflinching gaze.

"You lie!" thundered Adam Hawk. Magdalene started and flushed crimson, as though smitten upon the brow, but she did not reply. She quickly composed herself, and cast down her eyes.

"Confess, instantly, that you have been to St. Leonard's, and that you have had to conceal your fault and escape punishment!" commanded the father; but the child was silent, motionless. "Confess, instantly, or I will thrash you within an inch of your life, and until you do!"

But Magdalene never opened her compressed lips, or raised her downcast eyes. Something in the matchless beauty, purity, and patience of her air touched his heart, and perhaps deceived him, for he said, in a less harsh voice,

"Repent and confess, and I will forgive you!"

This softened tone succeeded better with Magdalene, for now raising her eyes to his face with a sort of sorrowful dignity, very strange and alarming in a child, she said,

"I fear are not believed even when they speak the truth." Lips accused of lying should close themselves forever. Until you trust me, I will be silent."

"What!" ejaculated Adam Hawk, astonished and enraged at a resistance so unexpected and incredible, yet so calm. "What!" he thundered, as underneath his darkening brow his hawk eyes started, seeming to grapple her form with a hook-like clutch. He who had been the awful, absolute master of his household for half a century, and never before met opposition—he whose wife and child had been greater slaves to him even will than any negro on the plantation—to be defied now by an infant, his grand-child! It was incredible! it was astounding! it was stupendous! the criminality of the thing was even lost in its marvellousness! Adam Hawk did not stop to consider that his first slave, his *wife*, had been of another race—that as for his *child*, traits of character are not reproduced in the second, but in the third generation, and that in his grandchild his infant sire was opposed to him.—"What!" he roared, and thrust out his talon hand, as though he would have seized the child, but withdrawing it suddenly, as though he feared to trust her form in his own grasp! He turned and strode away, and reaching a whip from a rack across which it lay, he approached her, shaking it sternly.—"Come, mistress! We will see how long this vow of silence will be held! Speak! Confess that you have disobeyed me! that you went to St. Leonard's, and that you have lied to conceal your fault, and escape punishment. Speak, minion! Confess, before this lash descends upon you!"

Magdalene was unmoved. Magdalene was naturally firm as rock, and just now her enthusiasm had been kindled, by reading of the firmness and constancy of martyred virtue—and now to her outraged truth and integrity—the rack! the rack! would not have drawn one word from her lips. And now, furious with anger, Adam Hawk raised the lash that would assuredly have descended upon the shoulders of the proud and beautiful child, but that the door was suddenly burst open by the Goblin, who had evidently been eave-dropping, and now breaking in, caught the uprised arm of the enraged man, exclaiming,

"Ah! for God Almighty's sake, master, don't, don't. Try moral 'reading little longer, after you result to carnal weapons as a, as a dressed assault! (*drawing breath*)—try moral 'reading!"

"There!" said Adam Hawk, lowering the whip. "There! there is one before whom you cannot pretend in your lie, or your lying silence. Uncle Biggs can you go, and gave me information."

Magdalene turned her large eyes slowly, inquiringly upon the Goblin, who said, in answer to that mute appeal—what, by the way, he really thought,

"Yes, honey, I sure you go, you know I did—You spinning off like a kilterscount! and away you went a-scuttering down the steps as fast as you could go, soon as ever I told you how you ought to, in time.—'Dest fore my heboan' Dreamer you did, chile! Now, don't 'ry, child to moral 'reading!'"

"Confess!" vociferated Adam Hawk. But Magdalene's large eyes were fixed upon the ground again, and her lips compressed together.

"Coward!" thundered Adam Hawk, elevating the lash! but the firm lips were motionless, not even the scum corroding her young bosom curled them! "Take care, vain!" and again the lash was whirled into the air, and would have descended with a sharp rasp upon the shoulders of the child, but that with a cry of mingled anguish and despair, and with the bound of a panther, the form of the wife of the room and sprang upon a table where she stood at bay! and no regardless at lay, could have lashed more spiritedly, terribly beautiful than that child as she stood there consuming with the fierce anguish of her impotent wrath and shame! as she stood there with the smouldering fire of the blood of a thousand Warwicksmen flaming through her crimson cheeks and blazing eyes! Again the madman, for such Adam Hawk now was, rushed furiously upon her, when a loud knock at the door was followed by the instantaneous presence of Brum, the Dotterwel, whose electric apprehension took in the whole scene at a glance.

"Brother! Demon! what were you about to do?" exclaimed he, seizing the whip from the hand of Adam, and whirling it away through the open window.

"I was about to chastise her for falsehood! How dare you interfere?" growled the old man, turning upon the dwarf.

"*Her*, for falsehood?" sneered Brum, going up to the table and looking with enthusiasm at Magdalene. "*Her*—little Indian princess! *Her*, for falsehood! Adam Hawk, I have but seen her since she was a babe, but now looking at her, I tell you, Adam Hawk, that she never told a falsehood in her life! That she would not have lied to have saved your neck from the rope, and your soul from eternal perdition, even when she loved you—as she will never love her sire again!" said the dwarf, as he raised his arms, in a gingerly manner, however, as though he was about to take hold of a young catamount. But Magdalene's countenance softened—softened into that mellow and beautiful language common to its face, and to the leopard's in repose, and she passed her arm around his neck and suffered him to lift her from the table.

"I will not be balked so! I will not be trampled upon in my own house!" muttered the old man, in the deep reverberating tones of retiring thunder, as his fury began to subside under the new impression that he might have been wrong.

"I will not be balked so! If she has told a falsehood she shall be severely punished!"

"And what shall be done with you if you have wrongly abused her? Her parents can do no wrong, I suppose?"

"Brum! I—"

"Tut, tut! is this the way in which you receive an old comrade after a ten years' absence? Fool, no matter for me! I came to tell you that the brig Confidence has cast anchor below, and that Judge Washington, with his family, are on board! He has come to the main land with the intention of procuring better assistance in the education of his grand-daughter and heiress. Miss Washington, my island freedom! my Miranda, as I call her." Bring Caliban at his service, and boon and everything!"

"Judge Washington below! This is sudden!" said Adam Hawk thoughtfully.

"I am looking at it!"

"Ah! he has come upon you in an hour you did not of! I hope he will find you watching lamps filled and trimmed and burning!"

"I am prepared to render an account of my stewardship! Judge Washington below! Well, this is sudden! How is the Judge and the young lady?"

"The Judge is hale, and the young lady, my island queen, is—but did I not tell you that you are to gear up the carriage and drive down to the beach immediately, and bring them up? They are to sleep here to-night—the mansion house being considered too damp and cold until it has been aired and warmed with fires a day or two."

"I could that I had known of his proposed arrival! I might have had the mansion house made comfortable for his reception," said Adam Hawk, thoughtfully.

"Oh, aye! and a great many other things to better residence! But, courage, man! I know you do not grudge your hospitality to the master of the estate, and for the rest—why you know it is not the first time, by many hundreds, that Joseph Washington has sat and slept in this that was his birth-place, and his residence for forty years. Come, hurry, friend Adam, hurry, gear up and go down for them, while I stir Goblin up and have supper got against they get here—have you no woman about the house?"

"No! I hate to have women about when I can do without the creatures, for I will send one from the quarters as I go," said Adam Hawk, leaving the house.

"Go, Gollizer, and get together the best you can for your master's supper," said the dwarf, and he sat down in a leathern arm chair near the stove with the child, he sat down and called her to him. Magdalene approached, and stood before him. He drew her between his knees and taking his hands upon her shoulders, looked at her long and watchfully, she returning his searching gaze. And so the old deformed dwarf and the beautiful child understood each other perfectly.

"You were very deeply moved just now, Magdalene?" said the dwarf.

"Yes—if he had struck me, I should have killed myself! I did not say it, or think it aloud, but the more I think of it now, the worse I think of it, and the sorer I feel that if he had struck me, I should kill myself."

"I believe it! firmness, self-esteem, destructiveness, monstrous!" muttered the dwarf to himself—and then he added aloud.—"Magdalene, you are not raging, but you have more malign feelings now than you ever exhibited! And I do so love ages, when you openly defied him!"

"It is deeper down," said the child. "the more I think of it, the worse I hate it—and I cannot help thinking of it!"

"I know it! firmness, concentrativeness, inconsistency!"

"But how did you know, that I would not tell a falsehood? It was true! I would not! not to save myself from being torn to pieces by wild beasts—not to save myself from being cast into the flames and burned alive to cinders, would I tell a falsehood, or do a single thing to make me lie! more!"

"Conscientiousness, self-esteem, inordinate," muttered the dwarf to himself, laying his hand upon her stately head.

"But how did you, when I never remember to have seen before—know that I would not, while he who has brought me up from infancy, suspected me?"

"My child, from your head and face, as well as from your air and manner—though the latter except a childhood, is not so sure a guide, as it can be assumed—but on the former, my child, in the face and head, the character is written as plainly, as clearly, and as truly, for those who can read the language, as the inscription of a printed volume. Magdalene! you are a wonderfully beautiful child, and you will be an unusually beautiful woman—that is a great deal, but it is little to what I am about to say. Magdalene! you are a very bad and a very good child! you are endowed with strong passions, strong intellect, and a strong will! There is no medium course for you in life! an ignoble or a lofty and heroic destiny will be yours! infamy or fame! disgrace or dominion, is written in characters of fire upon tablets of iron in your character! Were you a man, Magdalene, and in Europe, I should say a child in a course could complete you destiny! as it is in Magdalene, you will be a great criminal or an illustrious woman! Why do I talk to you so, my child? because I cannot help it! Magdalene, you appear surprised by what I have said, but from long habit I am proof against your surprises. I partly understand me, little one?"

"Yes! my blood runs cold, and—hot! Tell me! tell me! how I may keep from being a bad—how I may become a good and great woman!"

"Ah! Magdalene! other agencies! other agencies! the mind is being educated for good or evil, far enough out of the sphere of my knowledge and influence—which is to destroy or preserve! yours!"

They gazed at each other in silence—the dwarf contemplating the strong fire greater and far more than ever before, that had ever fallen under his vision—the child trying to read in the eyes of the man the mysteries of the future—and within the blood coursed on as profoundly intriguing than both, tortuous Goblin, the whites of whose spherical eyes gleamed in the twilight as he muttered to himself—"Master Dwarf! I'm sorrier for that child is a whip, that bodies is a conjurer."

Only for a moment remained they thus—when the sound of approaching footsteps and voices crossed them, and a couple of negro women, hastily summoned from the quarters, entered to set the supper.

"Now, my child," said the dwarf, relaxing Magdalene, "you must go and prepare a second chamber for a little girl about your age and size. I suppose you have heard of the Judge's grand-child, Virginia?"

"Miss Washington, the great county princess—the who will have the two largest estates on the Western shore, besides the island in the bay—the who will have the little Island Princess—yes! oh my life! I have heard a great deal of her. She shall have my bed-room! it is the best in the house!"

And Magdalene left him and went into the room chamber to prepare it for the little guest. She kindled a bright fire—swept up the hearth—gally—painted it with the red-ochre from the swamps; then going to her press she took out the boarded treasures of her chamber—the quilt of scarlet stars on a white ground, and the hand wrought white toilet cover—both the work of her mother's fingers—and placed one upon the bed and the other upon the chest of drawers; and lastly she went out into the hall, and laying her sacrilegious hands upon the hanging book-shelf, carried it with all its volumes—Fathers, Family Physician, Poultry Breeding, and all, into the chamber, and hung it up over the mantle-piece, to the crowning glory of the room so adorned magnificence.

She had scarcely completed that, when the sound of many feet and voices, announced her to the entire room to see the newly arrived guests.

CHAPTER IV.

VIRGINIA.

A fairer or a lovelier [illegible]
Than of the elegant [illegible]
To dwell in [illegible] of the night,
And [illegible] very gentle [illegible]
Imagine that we dream.

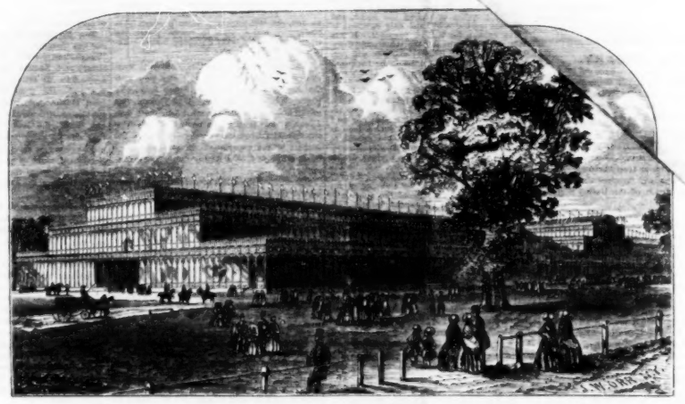
George [illegible]

[illegible]
[illegible]
[illegible]

A. Mapleton entered the hall by one door, the opposite door opened, admitting first an elderly gentleman of stately appearance, clothed to complete black—and next a youth of seventeen or thirteen years, of slender form, but complexion large, clear eyes and broad brow, modeled in the mould of young Adam Hawk, and the hand a little girl, whose dazzling radiance of beauty seemed to flash upon the vision with the sudden splendor of a sun burst.

Virginia Washington was a blonde of the most brilliant type. She, too, was tall and full formed for her age, and might rather have been taken for twelve than for ten years of age. Her complexion was of that sweet, trusty lustrous quality—with brilliant ultra-marine blue eyes, and sunshine golden red hair—the last crowning glory of her glorious beauty. Her splendid form was enveloped in a long cloak of white cloth, lined with silver fox, fell in many fabulous folds, reaching to the most of the lumbing material is glass and iron, the entire outside being composed of the. The entire cost of erecting and maintaining the building, for a year, amounted to £100,000, or about $500,000. It is proposed, however, to dispose of the materials after the close of the exhibition, in which event the expense will be reduced to £70,000. While the actual labor of construction proceeded, a vast amount of preparatory work went on simultaneously. Sashes, window frames, &c., were got ready by hundreds of workmen, under neighboring sheds. Piles of material were collected in every part of the ground, and, at the 1st of December, thirty-nine of the men employed, 1000 hands were then employed, afterwards increased to 1,500. The iron work was all brought from Birmingham.—The glass was all furnished by one firm. The timber used was from the Baltic, and of excellent quality. Gas was laid in the grounds, and the work continued during most or all of the night. Within a commodious set of offices, the heads of departments regulated the work and controlled the division of labor to be pursued. An ingenious system of brass checks or tokens was devised to determine the number of hours per day for which each man labored, and the pay which was due him. The whole business was carried out in the most systematic and orderly manner, and it is very remarkable with how little noise and bustle the work proceeded.—Nearly every thing was brought on the ground ready to be put up, and the hushed sound which reached the ear was the occasional click of the hammer, "closing up rivets." Over so large a space the noise of labor was lost, and the building rose almost as noiselessly as did Solomon's Temple. Not only will America furnish her full share of articles for the exhibition, but the ingenuity of one of her sons is thought to have brought into exercise for the adornment of the building itself. We learn that Mr. Benjamin Hardinge, of Cincinnati, has proposed to cover the iron columns, pilasters, entablatures, &c., with a kind of porcelain, or variegated enamel, giving them the richness and beauty of the choicest polished marble and precious stones, viz.—the agate, chalcedony, jasper and other siliceous formations. He also proposes to apply liquid silicates to the glass, in variegated colored crystals, in primarily or softly blended rainbow tints, which would give a beautiful mellow light to the interior, and perhaps the blinds which were at first proposed to modify the glare of light through such an immense surface of glass. The expense of this would be comparatively small. The material being composed of quartz, or white sand, dissolved in large quantities, through the agency of hydrofluoric acid, and other solvents. It is said to be the cheapest finish upon iron or glass ever known, is applied with great facility, and so hard as not to be moved by a file.

"A vast temple," says an English paper, "has been raised, in which the brotherhood of nations is to be celebrated,—a temple enjoying the temperature of June, at once thoroughly ventilated and refreshed, light in appearance as a bamboo cane, and strong as a Norman Keep, with dome radiance as graceful as those of the Alhambra, and resembling nothing, perhaps, that was ever before erected, but some gigantic conservatory, at once graceful and magnificent." Let us hope that the Exhibition to be held in it, will lead to the advancement of the great cause of National peace and concord.



THE CRYSTAL PALACE OF CONCORD.

Such is the name given to the magnificent building which has been erected in Hyde Park, London, to contain the contributions of all nations for the great Exhibition of 1851, an universal interest felt in this subject, has induced us to present an engraving of the building—for which we are indebted to the publishers of "HODGES'S MAGAZINE." This wonderful production of art is 1,848 feet long, by 408 broad, covering about 18 acres of ground, and giving, with the galleries, an exhibiting surface of 21 acres. The total cubic contents are 33,000,000 feet, giving room for forming eight miles of exhibition tables. A gallery round the inside will extend nearly a mile in length. The columns is 3,230, varying in length from 14 feet 8 inches to 20 feet. They will, the sashes and glass are throughout similar in form. There are 2,224 cast-iron girders for supporting the galleries and roof, 1,128 intermediate beams, and 538 wrought iron trusses. The gutters for carrying off the water, ingeniously carried through the columns, are 34 miles in length. There are 202 miles of sash bars, and 300,000 superficial feet of glass. Some wood is used for posts and flooring, but

---

"Now, then, tell me that since you left me this morning, you have been nowhere but to the terrace of Prospect Hall, and the forest, and thence home."

"I am doing it! I am looking at you now, and I tell you that I have been nowhere since I left you this morning, except to the terrace of the hall, and the forest, and home!" said Magdalene, with unfaltering tone, and unflinching gaze.

"You lie!" thundered Adam Hawk. Magdalene started and flushed crimson, as though smitten upon the brow, but she did not reply. She quickly composed herself, and cast down her eyes.

"Confess, instantly, that you have been to St. Leonard's, and that you have lied to conceal your fault and escape punishment!" commanded the father; but the child was silent, motionless. "Confess, instantly, or I will thrash you within an inch of your life, and until you do!"

But Magdalene never opened her compressed lips, or raised her downcast eyes. Something in the matchless beauty, purity, and patience of her air touched his heart, and perhaps deceived him, for he said, in a less harsh voice,

"Repent and confess, and I will forgive you!"

This softened tone succeeded better with Magdalene, for now raising her eyes to his face with a sort of sorrowful dignity, very strange and alarming in a child, she said,

"I fear are not believed even when they speak the truth." Lips accused of lying should close themselves forever. Until you trust me, I will be silent."

"What!" vociferated Adam Hawk, astonished and enraged at a resistance so unexpected and incredible, yet so calm. "What!" he thundered, as underneath his darkening brow his hawk eyes started, seeming to grapple her form with a hook-like clutch. He who had been the awful, absolute master of his household for half a century, and never before met opposition—he whose wife and child had been greater slaves to him even will than any negro on the plantation—to be defied now by an infant, his grand-child! It was incredible! it was astounding! it was stupendous! the criminality of the thing was even lost in its marvellousness! Adam Hawk did not stop to consider that his first slave, his *wife*, had been of another race—that as for his *child*, traits of character are not reproduced in the second, but in the third generation, and that in his grandchild his infant sire was opposed to him.—"What!" he roared, and thrust out his talon hand, as though he would have seized the child, but withdrawing it suddenly, as though he feared to trust her form in his own grasp! He turned and strode away, and reaching a whip from a rack across which it lay, he approached her, shaking it sternly.—"Come, mistress! We will see how long this vow of silence will be held! Speak! Confess that you have disobeyed me! that you went to St. Leonard's, and that you have lied to conceal your fault, and escape punishment. Speak, minion! Confess, before this lash descends upon you!"

Magdalene was unmoved. Magdalene was naturally firm as rock, and just now her enthusiasm had been kindled, by reading of the firmness and constancy of martyred virtue—and now to her outraged truth and integrity—the rack! the rack! would not have drawn one word from her lips. And now, furious with anger, Adam Hawk raised the lash that would assuredly have descended upon the shoulders of the proud and beautiful child, but that the door was suddenly burst open by the Goblin, who had evidently been eave-dropping, and now breaking in, caught the uprised arm of the enraged man, exclaiming,

"Ah! for God Almighty's sake, master, don't, don't. Try moral 'reading little longer, after you result to carnal weapons as a, as a dressed assault! (*drawing breath*)—try moral 'reading!"

"There!" said Adam Hawk, lowering the whip. "There! there is one before whom you cannot pretend in your lie, or your lying silence. Uncle Biggs can you go, and gave me information."

Magdalene turned her large eyes slowly, inquiringly upon the Goblin, who said, in answer to that mute appeal—what, by the way, he really thought,

"Yes, honey, I sure you go, you know I did—You spinning off like a kilterscount! and away you went a-scuttering down the steps as fast as you could go, soon as ever I told you how you ought to, in time.—'Dest fore my heboan' Dreamer you did, chile! Now, don't 'ry, child to moral 'reading!'"

"Confess!" vociferated Adam Hawk. But Magdalene's large eyes were fixed upon the ground again, and her lips compressed together.

"Coward!" thundered Adam Hawk, elevating the lash! but the firm lips were motionless, not even the scum corroding her young bosom curled them! "Take care, vain!" and again the lash was whirled into the air, and would have descended with a sharp rasp upon the shoulders of the child, but that with a cry of mingled anguish and despair, and with the bound of a panther, the form of the wife of the room and sprang upon a table where she stood at bay! and no regardless at lay, could have lashed more spiritedly, terribly beautiful than that child as she stood there consuming with the fierce anguish of her impotent wrath and shame! as she stood there with the smouldering fire of the blood of a thousand Warwicksmen flaming through her crimson cheeks and blazing eyes! Again the madman, for such Adam Hawk now was, rushed furiously upon her, when a loud knock at the door was followed by the instantaneous presence of Brum, the Dotterwel, whose electric apprehension took in the whole scene at a glance.

"Brother! Demon! what were you about to do?" exclaimed he, seizing the whip from the hand of Adam, and whirling it away through the open window.

"I was about to chastise her for falsehood! How dare you interfere?" growled the old man, turning upon the dwarf.

"*Her*, for falsehood?" sneered Brum, going up to the table and looking with enthusiasm at Magdalene. "*Her*—little Indian princess! *Her*, for falsehood! Adam Hawk, I have but seen her since she was a babe, but now looking at her, I tell you, Adam Hawk, that she never told a falsehood in her life! That she would not have lied to have saved your neck from the rope, and your soul from eternal perdition, even when she loved you—as she will never love her sire again!" said the dwarf, as he raised his arms, in a gingerly manner, however, as though he was about to take hold of a young catamount. But Magdalene's countenance softened—softened into that mellow and beautiful language common to its face, and to the leopard's in repose, and she passed her arm around his neck and suffered him to lift her from the table.

"I will not be balked so! I will not be trampled upon in my own house!" muttered the old man, in the deep reverberating tones of retiring thunder, as his fury began to subside under the new impression that he might have been wrong.

"I will not be balked so! If she has told a falsehood she shall be severely punished!"

"And what shall be done with you if you have wrongly abused her? Her parents can do no wrong, I suppose?"

"Brum! I—"

"Tut, tut! is this the way in which you receive an old comrade after a ten years' absence? Fool, no matter for me! I came to tell you that the brig Confidence has cast anchor below, and that Judge Washington, with his family, are on board! He has come to the main land with the intention of procuring better assistance in the education of his grand-daughter and heiress. Miss Washington, my island freedom! my Miranda, as I call her." Bring Caliban at his service, and boon and everything!"

"Judge Washington below! This is sudden!" said Adam Hawk thoughtfully.

"I am looking at it!"

"Ah! he has come upon you in an hour you did not of! I hope he will find you watching lamps filled and trimmed and burning!"

"I am prepared to render an account of my stewardship! Judge Washington below! Well, this is sudden! How is the Judge and the young lady?"

"The Judge is hale, and the young lady, my island queen, is—but did I not tell you that you are to gear up the carriage and drive down to the beach immediately, and bring them up? They are to sleep here to-night—the mansion house being considered too damp and cold until it has been aired and warmed with fires a day or two."

"I could that I had known of his proposed arrival! I might have had the mansion house made comfortable for his reception," said Adam Hawk, thoughtfully.

"Oh, aye! and a great many other things to better residence! But, courage, man! I know you do not grudge your hospitality to the master of the estate, and for the rest—why you know it is not the first time, by many hundreds, that Joseph Washington has sat and slept in this that was his birth-place, and his residence for forty years. Come, hurry, friend Adam, hurry, gear up and go down for them, while I stir Goblin up and have supper got against they get here—have you no woman about the house?"

"No! I hate to have women about when I can do without the creatures, for I will send one from the quarters as I go," said Adam Hawk, leaving the house.

"Go, Gollizer, and get together the best you can for your master's supper," said the dwarf, and he sat down in a leathern arm chair near the stove with the child, he sat down and called her to him. Magdalene approached, and stood before him. He drew her between his knees and taking his hands upon her shoulders, looked at her long and watchfully, she returning his searching gaze. And so the old deformed dwarf and the beautiful child understood each other perfectly.

"You were very deeply moved just now, Magdalene?" said the dwarf.

"Yes—if he had struck me, I should have killed myself! I did not say it, or think it aloud, but the more I think of it now, the worse I think of it, and the sorer I feel that if he had struck me, I should kill myself."

"I believe it! firmness, self-esteem, destructiveness, monstrous!" muttered the dwarf to himself—and then he added aloud.—"Magdalene, you are not raging, but you have more malign feelings now than you ever exhibited! And I do so love ages, when you openly defied him!"

"It is deeper down," said the child. "the more I think of it, the worse I hate it—and I cannot help thinking of it!"

"I know it! firmness, concentrativeness, inconsistency!"

"But how did you know, that I would not tell a falsehood? It was true! I would not! not to save myself from being torn to pieces by wild beasts—not to save myself from being cast into the flames and burned alive to cinders, would I tell a falsehood, or do a single thing to make me lie! more!"

"Conscientiousness, self-esteem, inordinate," muttered the dwarf to himself, laying his hand upon her stately head.

"But how did you, when I never remember to have seen before—know that I would not, while he who has brought me up from infancy, suspected me?"

"My child, from your head and face, as well as from your air and manner—though the latter except a childhood, is not so sure a guide, as it can be assumed—but on the former, my child, in the face and head, the character is written as plainly, as clearly, and as truly, for those who can read the language, as the inscription of a printed volume. Magdalene! you are a wonderfully beautiful child, and you will be an unusually beautiful woman—that is a great deal, but it is little to what I am about to say. Magdalene! you are a very bad and a very good child! you are endowed with strong passions, strong intellect, and a strong will! There is no medium course for you in life! an ignoble or a lofty and heroic destiny will be yours! infamy or fame! disgrace or dominion, is written in characters of fire upon tablets of iron in your character! Were you a man, Magdalene, and in Europe, I should say a child in a course could complete you destiny! as it is in Magdalene, you will be a great criminal or an illustrious woman! Why do I talk to you so, my child? because I cannot help it! Magdalene, you appear surprised by what I have said, but from long habit I am proof against your surprises. I partly understand me, little one?"

"Yes! my blood runs cold, and—hot! Tell me! tell me! how I may keep from being a bad—how I may become a good and great woman!"

"Ah! Magdalene! other agencies! other agencies! the mind is being educated for good or evil, far enough out of the sphere of my knowledge and influence—which is to destroy or preserve! yours!"

They gazed at each other in silence—the dwarf contemplating the strong fire greater and far more than ever before, that had ever fallen under his vision—the child trying to read in the eyes of the man the mysteries of the future—and within the blood coursed on as profoundly intriguing than both, tortuous Goblin, the whites of whose spherical eyes gleamed in the twilight as he muttered to himself—"Master Dwarf! I'm sorrier for that child is a whip, that bodies is a conjurer."

Only for a moment remained they thus—when the sound of approaching footsteps and voices crossed them, and a couple of negro women, hastily summoned from the quarters, entered to set the supper.

"Now, my child," said the dwarf, relaxing Magdalene, "you must go and prepare a second chamber for a little girl about your age and size. I suppose you have heard of the Judge's grand-child, Virginia?"

"Miss Washington—the great county princess—the who will have the two largest estates on the Western shore, besides the island in the bay—the who will have the little Island Princess—yes! oh my life! I have heard a great deal of her. She shall have my bed-room! it is the best in the house!"

And Magdalene left him and went into the room chamber to prepare it for the little guest. She kindled a bright fire—swept up the hearth—gally—painted it with the red-ochre from the swamps; then going to her press she took out the boarded treasures of her chamber—the quilt of scarlet stars on a white ground, and the hand wrought white toilet cover—both the work of her mother's fingers—and placed one upon the bed and the other upon the chest of drawers; and lastly she went out into the hall, and laying her sacrilegious hands upon the hanging book-shelf, carried it with all its volumes—Farmers, Family Physician, Poultry Breeding, and all, into the chamber, and hung it up over the mantle-piece, to the crowning glory of the room so adorned magnificence.

She had scarcely completed that, when the sound of many feet and voices, announced her to the entire room to see the newly arrived guests.

CHAPTER IV.

VIRGINIA.

A fairer or a lovelier [illegible]
Than of the elegant [illegible]
To dwell in [illegible] of the night,
And [illegible] very gentle [illegible]
Imagine that we dream.

George [illegible]

[illegible]
[illegible]
[illegible]

A. Mapleton entered the hall by one door, the opposite door opened, admitting first an elderly gentleman of stately appearance, clothed to complete black—and next a youth of seventeen or thirteen years, of slender form, but complexion large, clear eyes and broad brow, modeled in the mould of young Adam Hawk, and the hand a little girl, whose dazzling radiance of beauty seemed to flash upon the vision with the sudden splendor of a sun burst.

Virginia Washington was a blonde of the most brilliant type. She, too, was tall and full formed for her age, and might rather have been taken for twelve than for ten years of age. Her complexion was of that sweet, trusty lustrous quality—with brilliant ultra-marine blue eyes, and sunshine golden red hair—the last crowning glory of her glorious beauty. Her splendid form was enveloped in a long cloak of white cloth, lined with silver fox, fell in many fabulous folds, reaching to the most of the lumbing material is glass and iron, the entire outside being composed of the. The entire cost of erecting and maintaining the building, for a year, amounted to £100,000, or about $500,000. It is proposed, however, to dispose of the materials after the close of the exhibition, in which event the expense will be reduced to £70,000. While the actual labor of construction proceeded, a vast amount of preparatory work went on simultaneously. Sashes, window frames, &c., were got ready by hundreds of workmen, under neighboring sheds. Piles of material were collected in every part of the ground, and, at the 1st of December, thirty-nine of the men employed, 1000 hands were then employed, afterwards increased to 1,500. The iron work was all brought from Birmingham.—The glass was all furnished by one firm. The timber used was from the Baltic, and of excellent quality. Gas was laid in the grounds, and the work continued during most or all of the night. Within a commodious set of offices, the heads of departments regulated the work and controlled the division of labor to be pursued. An ingenious system of brass checks or tokens was devised to determine the number of hours per day for which each man labored, and the pay which was due him. The whole business was carried out in the most systematic and orderly manner, and it is very remarkable with how little noise and bustle the work proceeded.—Nearly every thing was brought on the ground ready to be put up, and the hushed sound which reached the ear was the occasional click of the hammer, "closing up rivets." Over so large a space the noise of labor was lost, and the building rose almost as noiselessly as did Solomon's Temple. Not only will America furnish her full share of articles for the exhibition, but the ingenuity of one of her sons is thought to have brought into exercise for the adornment of the building itself. We learn that Mr. Benjamin Hardinge, of Cincinnati, has proposed to cover the iron columns, pilasters, entablatures, &c., with a kind of porcelain, or variegated enamel, giving them the richness and beauty of the choicest polished marble and precious stones, viz.—the agate, chalcedony, jasper and other siliceous formations. He also proposes to apply liquid silicates to the glass, in variegated colored crystals, in primarily or softly blended rainbow tints, which would give a beautiful mellow light to the interior, and perhaps the blinds which were at first proposed to modify the glare of light through such an immense surface of glass. The expense of this would be comparatively small. The material being composed of quartz, or white sand, dissolved in large quantities, through the agency of hydrofluoric acid, and other solvents. It is said to be the cheapest finish upon iron or glass ever known, is applied with great facility, and so hard as not to be moved by a file.

"A vast temple," says an English paper, "has been raised, in which the brotherhood of nations is to be celebrated,—a temple enjoying the temperature of June, at once thoroughly ventilated and refreshed, light in appearance as a bamboo cane, and strong as a Norman Keep, with dome radiance as graceful as those of the Alhambra, and resembling nothing, perhaps, that was ever before erected, but some gigantic conservatory, at once graceful and magnificent." Let us hope that the Exhibition to be held in it, will lead to the advancement of the great cause of National peace and concord.

Selected Sketch.

AN EVENING WITH THE MAGNETIC TELEGRAPH.

FROM CHAMBERS'S EDINBURGH JOURNAL.

The spider's touch, how exquisitely fine,
Feels at each thread, and feels along the line.

On arriving at the ——— station, I found that my baggage, which was to have been sent on from town, had not arrived. There was no time to be lost, and on applying to the superintendent of the station, an order was given to make inquiries at London by means of the telegraph. Impatient to get some information about the missing baggage, I strolled to the electric telegraph office, to hear what was the answer received. But no satisfactory information had as yet been obtained; on the contrary, nothing at all was known about the matter. I wanted another message sent up to town, but on working the needles, it was found that the telegraph was engaged in corresponding with some intermediate or branch station.

The clerk, with whom I continued chatting through the little opening where all communications are given and received, was very young, but there was something in his manner that prepossessed you favorably, and, moreover, there was a total absence of that airs quence of speech and quickness of manner that seem to have become a second nature with our railway officials. At last he invited me to enter his office—the very thing I had been manœuvring for and longing to do—for as I opened my head through the small opening, and looked into the long room, warmly carpeted, and, although it was the beginning of August, with a fire burning in the grate, I could just catch a glimpse of the small mahogany stand and dial of the telegraph, with which he had been talking to the people in London about my trunks, and was very desirous of seeing a little more. Books were lying about the fireplace which so used to indicate a taste not only for literature, but for its more imaginative provinces, and so, then, as we sat over the clear fire, I had just catch a glimpse of the small mahogany stand and dial of the telegraph, with which he had been talking to the people in London about my trunks, and was very desirous of seeing a little more. Books were lying about the fireplace which so used to indicate a taste not only for literature, but for its more imaginative provinces, and so, then, as we sat over the clear fire, I could

do without those little comforts. My brother and I are happy enough together."

"I should think," I observed, "the employment must have much in it that is pleasant—a charm peculiar to itself?"

"You are right," he said; "at first it possessed an indescribable charm. There was something mysterious about it; and it was with a strange feeling, unlike any thing I had ever known, that I used to find myself holding converse with others far off, and watching, as it were, their consciousness in the dialogue. But the novelty over, all this died away; and though I still like the employment, it is no longer invested with its original charm."

"Were you long in learning to work?" I inquired.

"Not very long—it is not so difficult; but it takes a long time before you are able to read the communications sent to you—that is to say, quickly and easily. The speed with which a message is conveyed depends much on the person receiving it: for if he is quick and clever, he will understand what the words are before they are spelled to the end; and so, meeting the other, as it were, half-way, the communication is carried on with great rapidity."

Here the hummer of the alarum, which, before we went into the other room, had been set, began making a tremendous noise.

"Ha!" said I, "some one is about to speak with you."

We went to the door of the little parlor, and looked into the office at the needles. They were moving backwards and forwards with their usual click click.

"Is it for you?" I asked.

"Yes," he replied; "so many times in the right, and so many times to the left, that signifies ——— station."

"What is it about?" I inquired, as I watched the seven needles, which, by their different movements over the small segment of a circle, expressed everything.

"It's about the down-train to-morrow. We are to send up some carriages."

"And were it, it from?"

"From the chief station in town."

The needles soon moved again.

"Is it still the people in London who are speaking?"

"No; now it is the ——— station."

I now had an opportunity of seeing how quickly my companion read the movements of the needles. Incessantly came the jerk, meaning "I understand," again and again at quickly-repeated intervals. Once there was an unusual movement, and I afterwards inquired what it meant.

"It meant," he replied, "'Say that once more.'" I could not make out what was said; and, just as I imagined, the other clerks had made a mistake."

Now came the answer; and it was astonishing how quickly it was delivered. As one's words pour out of the mouth in speaking, so here they were poured forth by handful. How the needles rushed backwards and forwards, then halted; now came a quick shake, and then off they dashed to the side with a bold decided swing! There was no hesitation here. Rattle, rattle, rattle; right, left, right; on it went without a pause; and soon the people at ——— had got their answer from the sang little parlor at the ——— station.

The evening had closed in, and there I still sat over the fire. A fire—a cool-fire in an English grate has a very considerable attraction for an Indian man who has been a long time from his old home. This was the case with myself; and therefore it was, I suppose, that I hung about the hearth as one does about a spot that is fraught with pleasant recollections. It was quiet, and cheerful, and cozy. Presently the clicking noise was heard again.

"Ah, ah! it is from the ——— station," said my companion, rising. "It is a friend of mine, who is speaking," he continued. "He wants to know if I shall come up next Sunday or not. I ——don't——think——I shall," he said, repeating the words he was expressing by the wires. "He asks me if I am alone." "No—a—friend—is here—with me."

"I am glad you have somebody with you, and are not alone, for it is most confoundedly dull," came back in reply.

"Almost every evening," said my companion, "we have a little chat before night comes on. He does not like being alone, so he talks with me."

"Who have you got with you?" asks the friend so lonesome at the ——— station.

"No—one—you—know," was the reply.

"I tell you what," I said, laughing, "I'll give him a riddle. Ask him, from a little Cain Adam first use a walking-stick directly.

"When Eve presented I exclaimed, 'I (cause)!' came back ——— and we both laughed.

"Confound the ——— fellow—I'm—sure—he—heartily——" repeated my companion, by ——— ——— ——— knew at the needles," I said, "how they are ——— ——— ———

SATURDAY EVENING POST.

PHILADELPHIA:
SATURDAY, FEBRUARY 8, 1851.

SATURDAY EVENING POST
STEAM-POWER BOOK AND JOB PRINTING OFFICE.
No. 96 South Third Street, Phila.,
Where Books, Pamphlets, Hand Bills, Way Bills, Circulars, Bill Heads, Cards, Labels, &c., &c., are printed with dispatch, in the neatest manner, and on the most reasonable terms.
DEACON & PETERSON, Proprietors.

THIS YEAR'S CAMPAIGN.

In the intervals of Mrs. Southworth's Novelets, we shall publish shorter novelets and stories from the pens of other well known writers. We have two now on hand, which shall be published as early as possible, viz.

The Iron Hand, by T. S. Arthur.

The Texan Hunters, by C. W. Webber, author of "The Scalp Hunter" and "Hunter Life in the Rye."

Reports of Lectures, the Cream of the Foreign Periodicals, Engravings, Congressional Reports, General News, Wit and Humor, &c., &c., shall be given as of old.

From Washington.

THIRTY-FIRST CONGRESS.

SENATE.

On the 27th, petitions were presented for the Ebony Line of Steamers, for a modification of the Tariff, against the Fugitive Slave Law, in favor of the repeal of all laws supporting slavery in the District of Columbia, &c. The last two were laid on the table.

Mr. Benton called up the Bill to pay Missouri the amount of the two per cent. fund received on sales of public lands.

Mr. Shields supported the Bill.

Mr. Clay said that at a proper time he could prove to the Senate that Missouri was not, to the amount of one farthing, the creditor of the United States on account of this two per cent. fund. He was too feeble then, but if the Bill was postponed, he would hereafter do so.

Mr. Bent:n was willing the Bill should be postponed, and the Bill was, for a short time, laid on the table.

Mr. Mason called up the Bill incorporating the Union Gas Light Company of the District of Columbia.

Mr. Walker moved to amend the Bill, by making the Stockholders individually liable for all debts contracted to the amount of his Stock, at the time the debt was contracted. After considerable debate, this amendment was carried, and the Bill ordered to be engrossed.

Mr. Borland moved, and the Bill authorizing the United States District Judge of Arkansas to appoint Steamboat Inspectors in that State, was taken up. The Bill was debated, amended, and ordered to be engrossed.

Mr. Gwin moved, and after debate the Senate took up the Bill to ascertain and settle the private land claims in California, reported by the Judiciary Committee.

Mr. Benton said that the Bill reported by this Committee was worse than a clear act of confiscation; the Committee had been deplorably and calamitously misfortunate. Where Mr. Gwin's Bill was bad, they have made it worse—wherein it was good, they have struck out, and where the Bill was positive good, but bad, they have originated something infinitely worse than anything before heard of. He proceeded at great length in a critical examination of the Bill reported by the Committee, and announced his intention of making its errors manifest, in detail, by motions to strike out and insert.

Mr. Berrien rejoined, and argued that this Bill was good enough in detail and with precision, the provisions of Mr. Fremont's Bill.

Mr. Benton was surprised that the distinguished senator from Georgia should attempt to shelter his blunders behind a pigmy drawn up in a young man who, perhaps, had never read law. He pointed out the blunders in this Bill, which Mr. Fremont could by no means have made.

Mr. Berrien said he had no desire to shelter himself behind the absent Senator from California, nor the absent one from Missouri. As to the charge of blundering, and other demonstrations contained in the courtly phrases which the Senator from Missouri had accustomed himself to use, he would answer it by stating that he did not believe the Senator from Missouri comprehended the provisions of the Bill about which he was talking. Adjourned.

On the 28th, Mr. Clay presented two petitions from citizens of Pittsburg and Cincinnati, Pa., complaining of the operations of the Tariff of 1846, and representing the suffering of the industry of iron, coal, glass, cotton and wool, by the ad valorem instead of specific duties.

Mr. Hamlin presented two petitions from citizens of Maine, for the repeal of the Fugitive Slave Law. Laid on the table.

Mr. Gwin offered a resolution calling for the correspondence between the United States and the British authorities relative to the seizure of the vessel at Astoria, Oregon. Adopted.

Mr. Badger from the Naval Committee, to whom had been referred the communication of the Secretary of the Navy, about the abolition of flogging in the Navy, reported a Bill to enforce discipline and promote good conduct and order in the Navy. The Bill provides for punishment by dismissal or discharge, by solitary confinement in irons, not exceeding thirty days, and to be fed on bread and water.

The Judiciary Private Land Bill then came up. The 15th section of the Bill provides that all claims rejected by the Commissioners, on appeal shall be decided, to be invalid, and all lands, claims for which shall not be patented within two years, shall be deemed the property of the United States, and for all claims without a patent shall be issued; provided that if the title of any claimant to such lands shall be contested by any other person, it shall be lawful for such other person to file a petition in the District Court, plainly and distinctly setting forth his title thereto—a copy of the petition to be served on the adverse party thirty days before the time appointed for hearing. The section also gives the Judge the power to grant an injunction on his petition, restraining a patent from being issued until the title thereto shall be finally decided.

Mr. Benton moved to strike out all that part of the section which allows third parties to come in and contest the issuing of the patent by petition.

Mr. Benton said that yesterday he had shown this Bill to be a flagrant violation of the Constitution of the United States and of the Judiciary Act. It proposed to give the United States Courts the right to try issues of fact in land claims against private citizens. The Bill allows the United States to bring a suit into Court to defend his lands, and after hearing the United States and the lawyers, with all their quibbles and tricks, it allows everybody else to come in and jump on his back, to attack him front, rear and both flanks. They can cover him with petitions—they can unite him as the old French translator of the Bible said Sampson did the Philistines—back and belly. He was always a friend of all actual settlers, and commenced his support of them in 1824, when in the General Assembly of Tennessee, and had continued it till now. The actual settlers in California were those who went there seventy years ago—they were such persons as Castro, who had seven and twenty children born on the soil. He again denounced the Bill as a violation of the Constitution and laws.

Mssrs. Berrien, Ewing, and Butler, defended the Bill and its constitutionality. Finally Mr. Benton moved to strike out was negatived, yeas 11, nays 27.

Mr. Walker moved to amend, by providing that lands granted by the Expiring Stage, shall only be considered as a relinquishment of the United States title. Adjourned.

On the 29th, Mr. Hale presented petitions from Pennsylvania and New Hampshire, praying for the repeal of the Fugitive Slave Law, and all other laws encouraging and supporting slavery. Laid on the table.

Mr. Rusk reported back the Bill reducing the rates of postage, and asked that it be taken up, in order to have it laid for some day. Mr. Clemens objected—and the Bill goes on the calendar.

The Bill for the Relief of the Virginia Woollen Company, restoring the amount of damages for failure of contract, was taken up, debated and postponed.

The Bill to ascertain California Private Land Claims was taken up.

The pending question was the amendment of Mr. Walker, to add to the 15th section, "That in every case where a patent shall be issued, such patent shall operate only as a relinquishment of the United States title." Mr. Baldwin moved to add to Mr. Walker's amendment, a proviso that the relinquishment of title by the United States shall inure only to the benefit of such person who has the best title. Mr. Walker accepted this as a modification of his amendment.

After a long debate the amendment was rejected—yeas 21, nays 24.

The eleventh section of the Bill provides that in decoding on the validity of claims, commissioners of Courts shall be governed by the Treaty of Hidalgo—the Law of Nations, laws, usages and customs of the Government from which the claim is derived, the principles of equity, and the decisions of the Supreme Court, so far as applicable.

Mr. Benton, at Mr. Soule's instance, moved to amend as follows: Provided, however, that persons in good faith within determined routes and boundaries for twenty years shall be prima facie evidence of complete title, even against the United States.

After further debate and without taking a vote, the Senate adjourned.

The Senate Committee report amendments to Postage Bill, fixing rates of pre-paid letters thereon for half-ounce, and five cents for half ounce letters not pre-paid. Postmaster's compensation not to exceed amount of salary received for year ending June 30th, 1851. The amendment exempting newspapers from postage for thirty miles, and a deduction of fifty per cent. if postage on magazines, if pre-paid, stricken out. They also strike out the provision taking away the right of exchange from those papers refusing to publish unstamped letters.

On the 30th, Mr. Ewing reported a Bill allowing the Regents of the Smithsonian Institution to pay into the Treasury $140,000 surplus in their hands, to be added to the permanent endowment of that institution.

Mr. Hush reported a joint resolution, providing that dead letters remaining in the Post Office in California and Oregon shall be opened in California by the Postmaster at San Francisco—all letters not containing valuables to be destroyed, those containing valuables to be sent to the Department at Washington by a special agent.

to be appointed at a salary of twenty-five hundred dollars. The joint resolution was considered, and its engrossment ordered.

Mr. Mason offered a resolution directing inquiry into the propriety of providing by law to pay Spanish claims on account of the Amistad case, as recommended by Mr. Polk, in his message, December, 1847. Mr. Chase objecting, the resolution lies over.

The Senate then took up the Bill on Private Land Claims in California. The question pending was Mr. Benton's modified amendment, that bona fide possession for twenty years should be evidence of perfect claim.

Mr. Gwinn opposed the amendment. It would secure to priests the vast mission lands, they having for more than twenty years held possession.

Mr. Benton replied, reading from Mexican laws, showing that the mission lands had been all secularized and made public property. There was not one square inch of land in California now held under mission grants.

Mr. Dawson read from Mr. Taylor's work on California, showing that the question of possession by priests was still in doubt.

Mr. Clay opposed the amendment, and then, on motion, the Senate adjourned.

On the 31st, Mr. Turner introduced a joint resolution, amendatory of joint resolution of 1848, expressing thanks of Congress to General Scott and Taylor, by directing the President to have made swords, with suitable devices, to be presented to all Major Generals and Brigadier Generals engaged in battles under Scott and Taylor.

Mr. Mason's resolution directing inquiry into the propriety of paying Spanish claimants arising out of the Amistad case, was called up.

Mr. Chase reported the circumstances of the Amistad case, and denied any justice in the claims against the United States on account of those claims.

Mr. Hale said this claim was the most outrageous demand ever heard of in those days of perfect harmony and fraternal love. When the agitators were dead and agitation quieted, it was not safe to push the moral sense of the people too far, by such claims as these—though those who have resisted slavery may now be tranquil, their feelings were existing at the bottom of seeming tranquillity.

Mr. Clay said this resolution was one of inquiry only. His opinions on the justice of the claim were not fixed either for or against it; he could not but remark on the evidence, that the peace and harmony of the recent measures were effectual; that the conduct of certain Senators in the agitation of domestic slavery was at an end, and the Senator from New Hampshire and those who act with him, seize upon every question relating to foreign trade, and endeavor to make some capital out of it to revive agitation on domestic slavery. The Senator from New Hampshire voted in the minority on the slave trade the other day. The Senator himself admits that the party of which he has been a leader, is now at the bottom, and there I hope they, and all others who desire agitation on domestic slavery will remain forever. I believe they will never rise again to disturb the country.

Mr. Hale said he never had introduced agitation; he did not introduce the slave trade proposition the other day, nor did he introduce this proposition. The Senator from Kentucky undertook to read him a lecture of a personal character. He was lectured under the belief that he was at the bottom. He knew no one better capacitated from experience to lecture on the conduct becoming those at the bottom, than the Senator from Kentucky. He was no prophet—but he would venture to declare, that any man who placed himself as a candidate for popular favor in any State in the Union, on the ground of being the author and supporter of this piteous compromise of last session, would find himself in the position of the man spoken of in the Greek fable, who, when the ship was wrecked, and while everyone seized something to support him in the sea, unfortunately took hold of the anchor and was carried to the bottom.

The Chair said he must arrest this debate. The Compromise was not the subject before the Senate.

Mr. Hale—According to military law, when a man is arrested he gives up his sword. I yield.

Mr. Mason said the resolution was one of inquiry only. The subject had been recommended to the attention of Congress by the President.

Mr. Chase said he would introduce any subject—would speak on any subject—he thought proper, regardless of what the Senator from Kentucky, or any one else might say. He never introduced agitation.

Mr. Hale proved that the resolution lay on the table; lost—yeas 6, nays 43.

The six yeas were—Messrs. Baldwin, Chase, Hale, Hamlin, Upham, Walker.

Mr. Winthrop said he had voted six times while in Congress, against the allowance of the claim, but he knew no principle on which the resolution, inquiring into the propriety of allowing the claim against the United States should not be adopted. The resolution was then adopted.

Mr. Rusk reported a Bill granting to Simon S. Rantz the Right of Way for a Telegraph from the Mississippi River to the Pacific Ocean.

The Chair presented a communication from Mr. Weightman, Senator elect from New Mexico, asking the consent of a law declaring New Mexico one of the United States on certain conditions. Referred to the Territorial Committee.

Mr. Hale presented a resolution calling upon the President to communicate all the correspondence between the United States and Spain relating to the Amistad claims. Laid over.

Mr. Foote presented a resolution, which was adopted, requesting the Secretary of State to communicate the information in his possession touching the expediency of adopting a graduating scale of diplomatic salaries.

The joint resolution concerning California dead letters, engrossed the day before, was taken up and passed.

The debate on the Bill concerning private land claims in California, was resumed. The amendment pending was on making twenty years possession in good faith, evidence against the United States of a perfect claim. Rejected—11 yeas, 37 nays.

Mr. Benton proposed various other amendments, which were lost.

On the 1st inst., Mr. Hunter offered the following resolution, which was adopted:

Resolved, That the Committee of Finance be instructed to inquire into the expediency of coining dollars, half and quarter dollars, composed of gold and silver, in the proportion of equal values, according to the standard between the two metals, as now fixed by law.

Mr. Hale's resolution, calling for correspondence relative to the Amistad claims, was taken up and adopted.

After a short executive session, the doors were opened, when Mr. Kaufman's death was announced by a message from the House.

Mr. Rusk moved the usual resolutions, which were adopted, when the Senate adjourned to attend the funeral on Monday.

HOUSE OF REPRESENTATIVES.

On the 27th, Mr. Haralson asked, but did not obtain leave to introduce a joint resolution, for their explanatory of the Bounty Land Law passed last September. The Secretary of the Interior, he said, has decided that, to obtain the benefit of this law, persons must actually have served in the army, whereas Mr. Haralson proposes that those who were mustered, but did not serve in actual hostilities, shall be entitled, they having been ready and willing to serve on duty, and this he contended, was the intention of the law.

Mr. Boyd moved the Bill to improve the Cumberland Run, in the Ohio River, should be made the order of the day for the succeeding Thursday. Refused.

Several other gentlemen wanted, but did not obtain consent, to introduce Bills and resolutions—among them the Bill appropriating lands to Pennsylvania for railroad purposes.

Mr. Johnson, of Arkansas, moved that the River and Harbor Bill be made the special order for the day for Tuesday next. Objection made—

To let the question, he moved a suspension of the rules. Decided in the negative—yeas 116, nays 70—not two-thirds.

The House went into Committee of the Whole on the Bill to supply deficiencies in appropriations for the present fiscal year.

On the 29th, the House resumed the consideration of the Bill heretofore reported by Mr. Johnson, of Tennessee, proposing to give to every head of a family one hundred and sixty acres of public domain, on condition that he will occupy and improve the same for a certain period.

Mr. Brown, of Mississippi, explained a substitute he intended to offer, the first section of which simply contemplated a continuation of the present Pre-Emption Laws; the second, that the right of pre-emption shall be perpetual instead of limiting it to one or two years; that the settler shall have as much time as his necessities require, to pay for the land, at the minimum of one dollar and twenty five cents per acre. He did not propose to give away the lands absolutely. His object was to secure a settlement and occupancy of a home against speculation and improvidence.

Mr. Vinton moved to lay the Bill on the table—decided in the negative—yeas 78, nays 96.

The House, by 14 to 81, refused to accord the demand for the previous question, which would have brought the House to a direct vote on the Bill.

Mr. Conger moved to refer it to the Committee of the Whole on the State of the Union.

Mr. Johnson, of Tennessee, called for the yeas and nays. To send the Bill there, was equivalent to its rejection.

The Bill was referred to the Committee—yeas 117, nays 64.

Mr. Julian moved to reconsider the vote, pending which the House went into Committee of the Whole on the State of the Union, on the Deficiency Appropriation Bill.

Several amendments were made, when all the clauses of the Bill were not through with.

The Tariff. Mr. Strong moved to amend by providing that on and after the first day of April next, all duties required by law to be levied, collected and paid on goods, wares and merchandise, shall be assessed on the market value, with the addition of such charges as are now imposed by law, at the time and place of export, provided that, upon all descriptions of iron, upon machinery made wholly or in part of iron, and upon anchors, chain cables and cavils, the duties shall be assessed upon the average prices, with the charges added, which like description of iron bore in principal ports during the ten fiscal years immediately preceding the year of importation, such values and charges to be ascertained and declared by the Secretary of the Treasury, to the basis for such succeeding fiscal year.

The duties on window glass and linseed oil shall be thirty per cent., and upon all descriptions of iron, upon machinery made wholly or in part of iron, and upon chain cables, anchors and cavils, the duties shall be forty per cent., provided that any excess of duties imposed by this act on any railroad iron, imported for the use of any railroad, actually and permanently laid down on the one of such railroad, within one year after the passage of this act, shall be remitted by the Secretary of the Treasury, on satisfactory proof being furnished that such iron was so imported and laid down.

The duties upon all cordage and yarns composed wholly or in part of hemp or grass, upon all manufactures, composed wholly or in part of sheep's wool; and upon all refined sugars, shall be respectively ten per centum advance, on and above the rate of duty now assessed by law on hemp and sheep's wool, manufactured and raw sugar, raw silk, indigo, and all articles

which, on the 20th of July, 1846, were exempt from duty, shall be admitted free of duty.

To prevent fraud from undervaluations, and to be uniformity in appraisements, there shall Appraisers appointed, as now provided for, local the general large, who shall prepare rules for several portion of the local Appraisers, visit the such other ports the United States, and perform ary may appoint the Secretary of the Treasury Appraisers shall good direct. Each of which of $2,000, with necessary annual compensation

That the periods during expenditure expenses, imports deposited in public, by existing laws, withdrawn for immediate warehouses may be exportation, and the same obligation or contract to three years.

Mr. Jones raised the question of amendment was irrelevant, and out of order. The do with the Deficiency Bill; and against the violation of the rule which declares that in amendments shall not be made in a general appropriation Bill.

Mr. Strong—I suppose the question is not debatable.

Mr. Meade, Chairman—This is a Democratic Pennsylvania Tariff.

Without proceeding further the Committee rose, and the House adjourned.

On the 29th, the Chairman, Mr. Meade, stated that the pending question, was the amendment of Mr. Strong, offered yesterday, to amend the Tariff Law, and pronounced it to be out of order. He said that the amendment was contrary to Parliamentary law, irrelevant to the Bill before the Committee, and the gonera policy of the Constitution, and the rules made in pursuance of it.

Mr. Strong appealed from the decision of the Chair.

The question was taken and the decision of the Chair sustained. Ayes 82—nays 87.

A number of similar amendments were offered, but all pronounced out of order—the Chair being sustained in each appeal.

Mr. Holmes offered an amendment, that if there be any deficiency in the Treasury in the fiscal year ending, the Secretary of the Treasury shall call on the States for the surplus revenue deposited with them, to be paid in such instalments as shall be most convenient and expedient. The Chairman decided it out of order.

Mr. Tuck offered an amendment, that on all cotton fabrics, plain and colored, imported on and after the 30th of June next, there shall be assessed and paid a duty of 25 per cent. on the value such articles here in the United States, on July 29, 1846, the value to be declared by the Secretary of the Treasury. Decided to be out of order.

Several amendments were made to the Deficiency Bill, when the Committee rose, and under the operation of the previous question, the amendments were concurred in, and the Bill passed. It appropriates about $1,300,000 to supply deficiencies in the appropriations for the present fiscal year.

On motion of Mr. Briggs, the House would into Committee of the Whole on the Bill for establishing Branch Mints in New York and St. Francisco—appropriating two hundred and twenty-five thousand dollars towards building for the first, and three hundred thousand dollars for the latter place.

Mr. Briggs said this was no new question to the House. In the twenty-ninth and thirtieth Congress, a Bill to establish a Mint in New York, passed, and he believed the Bill for a Mint in San Francisco, not considered in the Senate. If there existed at that period a necessity for a Mint,—at a time, when, before gold had been found in any abundance from California—how much greater, all must admit, did the necessity exist now for increased facilities for the coinage of the gold which is that constantly arriving at New York from the Pacific coast, and which, in all human probability, would continue for a long period of time. He read various statistics, and earnestly advocated the passage of the Bill, and said that New York, at the distant day, would be the received and commercial centre of the civilized world.

Mr. Chandler offered a substitute for the Bill establishing a Branch Mint at San Francisco, and an Assayer's Office in New York. Adjourned.

On the 30th, Mr. Giddings asked leave to offer a resolution requesting the President of the United States, if consistent with the public interest, to communicate to this body any correspondence which may have taken place between Great Britain and this country respecting the importation of British seamen in any port of the United States.

Objections were made.

Mr. Burt, from the Committee on Military Affairs, reported the Senate Bill, with an amendment, providing a retired list for officers of the army and marine corps, who have become infirm by reason of age, wounds and disease contracted in the service.

Mr. Burt briefly explained the object of the Bill, stating that it did not increase nor diminish the number or expenses of the army. The officer who refires to receive his one pay proper and service rations, and the officer next in rank to take his place, with pay proper of his own grade, and the allowance of pay of the grade of officer placed on the retired list.

Mr. Giddings knew of no more merit in an officer of the army who serves his country at the cannon's mouth, than one who braves public opinion here, when it is against him in the performance of his duty. Not so much merit in the one as the other. He looked on the Bill as laying the foundation for pensions, like those of European countries. He moved the Bill be referred to the Committee of the Whole on the State of the Union. Objected.

Mr. John A. King advocated the Bill, contending that it was for the efficiency of the service. Its sections were so clear as to show that not the increase of one officer, or one dollar was intended. It was for the House to act promptly. If the Bill should go to the Committee of the Whole on the State of the Union, it would never be reached.

Mr. Jones moved to lay the Bill on the table. The question was taken, and decided in the affirmative—yeas 94, nays 89.

Mr. Wentworth moved to reconsider the vote. Mr. Toombs moved to lay the motion on the table; decided in the affirmative—90 to 91.

The House then went into Committee of the Whole on the State of the Union on the Bill establishing a Branch Mint in New York, and a Branch Mint and Assayer's Office in San Francisco.

The pending question was on the substitute of Mr. Chandler, to establish a Branch Mint and Assayer's Office at San Francisco, and for purchasing deposites of bullion for coinage at the Mints, to be deposited with the Assistant Treasurer at New York, to be sent to Philadelphia, on the certificate of the Assistant Treasurer or Treasurers of the several Mints to be receivable in the payment of duties.

Mr. Chandler opposed the establishment of a Branch Mint at New York as a wanton waste of the public money, and protested against the authority of a Director of the Philadelphia Mint, that the capacity of that Mint for coining is now inadequate for any probable or possible demand, which can be made upon it, whether the coinage be a million or a hundred millions of dollars. Mr. Chandler said he doubted the utility of the smaller pieces. There was machinery, room and steam enough, and only more hands were required to extend the capacity of the Philadelphia Mint. He explained the provisions of his substitute, contending that they would answer business purposes in New York and San Francisco, if taken from the Philadelphia Mint, which, he said, was quite sufficient to establish a Branch in New York. He presented his objections at large to the Bill, which was, he said, to gratify a few gentlemen in the Branch not being required by public necessity nor economy.

Mr. Vandike said he resided midway between the belligerent parties—Philadelphia and New York—and was interested only so far as necessity and economy required. He was opposed to a Branch Mint at or near New York, and therefore moved to strike out New York in the Bill, and substitute Jersey City. He proposed this amendment, desiring the convenience of the last named place, and superior advantages in all respects. It would save cost and labor in bringing money as in New York. As a compromise, he moved the amendment would be adopted.

Mr. King, of New York, explained the floor, and gave way to a motion that the Committee rise, which prevailed.

On the 31st, the New York and California Branch Mint Bills were under discussion. The Bill was discussed by King, of N. Y., Florida, Dimmy, Holmes, Thompson, and Bell. The last four spoke against the proposition to establish a Mint at New York; the first two in favor of it.

Mr. Cabell offered an amendment to come in at the end of first section, "provided one-fourth of the aggregate coinage shall be in gold dollars, one-fourth in quarter eagles, one-fourth half eagles, one-eighth eagles, and one-eighth double eagles. He said that the mouth-pieces of the Philadelphia Mint at this time was very powerful. Laughter.) You will find, that during last year, more than twenty-three millions have been coined in double eagles, and that there was no hundred thousand in eagles, and the remaining million and a half in smaller coin. The object was very clear—it was to drive gold away from circulation among the people. It was the plan of bankers, jobbers and speculators, that they may not have competition with their obligations. The scheme was to plunder.

The amendment was declared adopted.

Mr. Van Dyke's amendment, substituting Jersey City for New York, was negatived.

Mr. Holmes offered an amendment, to establish a Mint at Charleston. Decided out of order.

After some remarks by Messrs. Brooks and Venable, the House adjourned.

On the 1st inst., Mr. Howard rose after the reading of the journal and announced the death of his colleague, David S. Kaufman. Yesterday, he said, Mr. Kaufman, at two o'clock, came to his desk, conversed on subjects of business relating to Texas, then passed out. No member seemed to bid favor for longer life. He was the image of vigorous and robust health.

At the close of the day (Howard) received a message that Mr. Kaufman was dying, and when he reached his lodgings, he found him pale and lifeless, under the cold hand of death. It seems that he left the Capitol at three o'clock, and proceeded to his hotel in his carriage, when a friend whom he met remarked that he was ill and pale. He observed that he was unwell and should retire to bed. He did so, in the midst of his family, apparently not very much indisposed, and at about five o'clock, after having conversed with his wife and children, he breathed his last, almost without a struggle and without pain. The physicians in attendance pronounced the disease an affection of the heart. Announced by the Great Messenger so suddenly and mercifully, reminds us what shadows we are, and what shadows we pursue.

Mr. Kaufman was a native of Cumberland co., Pa., and was born in 1811. He graduated at the Princeton College, in 1832, when he removed to Mississippi, and studied law with Gov. Quitman. He afterwards lived in Louisiana, and emigrated to Texas, where, in 1845, he was elected to the Texas Congress, and was Speaker of the House. He was the editorial friend of Annexation.

Mr. Davis and others paid a high eulogium on the private and public character of the deceased, contributing to offering the usual resolutions of regard, and that the members and attaches be informed on Monday.

Short complimentary notices of the deceased were made by Messrs. Mann, McLanahan, and Mr. Kaufman's native county; and Mr. McClernand. The House adopted the usual resolutions, and then adjourned.

The Markets.

PHILADELPHIA MARKET.

SATURDAY, FEB. 1, 1851.

REMARKS.—Business continues quite active, and a number of Southern and Western merchants have arrived, whose looking through the market preparatory to making their Spring purchases. Cotton has been in limited request, and in some instances lower rates have been accepted Breadstuffs are dull of sale, but prices have undergone no material change. In Groceries and Provisions the transactions are quite small, partly owing to the want of stocks to operate on.

FLOUR AND MEAL.—The Flour market has been dull and inactive; the demand for shipment has not been sufficient to warrant holders generally have been disposed of at $4.00; per bbl, at which it is freely offered, sales in lots for city consumption at $4.62½@4.75 for common and good brands, $5.00@5.62½ for extra, and $5.50@5.50 for fancy Ohio and New York W

Selected Poetry.

YOU AND I.

BY CHARLES MACKAY.

Who would scorn his humble fellow
For the coat he wears?
For the poverty he suffers?
For his daily cares?
Who would pass him in the highway
With averted eye?
Would you, he asks? No—you would not.
If you would—not *I*.

Who, when vice or crime repented,
With a great sorrow,
Asked for pardon, would refuse it—
More than heaven never!
Who to erring woman's sorrow
Would with taunts reply?
Would you, brother? No—you would not.
If you would—not *I*.

Who would say that all who differ
From his not must be
Wicked sinners, heaven rejected,
Sunk in Error's sea,
And enough them to predition
With a holy sigh?
Would you, brother? No—you would not,
If you would—not *I*.

Who would say that Vice is Virtue
In a hall of state?
Or that rogues are not dishonest
If they dine off plate?
Who would say Success and Merit
Never part company?
Would you, brother? No—you would not,
If you would—not *I*.

Who would give a cause his efforts
When the cause is strong,
But desert it on its failure,
Whether right or wrong?
Ever siding with the upmost,
Letting downmost lie?
Would you, brother? No—you would not.
If you would—not *I*.

Who would lend his arm to strengthen
Warfare with the right?
Who would give his pen to blacken
Freedom's page of light?
Who would lend his tongue to utter
Praise of tyranny?
Would you, brother? No—you would not.
If you would—not *I*.

Pictures of Life.

HUNGARIAN MILITARY SKETCHES.

From a translation of portions of a volume of Tales and Sketches by Hungarian authors, we take the following sketches of scenes in the late Revolution. They present the Hungarian military character in a vivid and romantic light:

A BALL.

This is a letter from a young lady to a friend, describing her and her mother's terror at the anticipated arrival of a Hungarian division, after English Guyon's glorious victory at Branisko; and relating how the old woman hid herself in cupboards and chuck-cases, and urged her daughter to stain her face black, in order to diminish her personal attractions—advice which the daughter, not exactly comprehending its motive, most indignantly rejects. Presently she is astonished by the arrival of a couple of handsome hussar officers, instead of the leather-clad Calmuck-visaged barbarians, seven feet high, and with beards to their waists, which her mamma has predicted; and still more is she surprised when, instead of breaking open doors and ill-treating women, the new comers organize a ball for that very night—a ball which she attends and where she is greatly smitten with elegant Captain of Honveds. He has just her out to dance, when the ball-room is startled by the sound of cannon, and an aide-de-camp to the hussar announces an attack upon the town. The officers buckle on their sabres, prepare to return. The fight, begging the ladies, [illegible] the enemy, and in little more than an hour [illegible] the dance. But ball-room. They have [illegible] not amongst them. The return flushed and [illegible] to be formed, but Laura still the handsome H[illegible] A tall dry-mannered Major, interrupted [illegible] approaches her. "Fair [illegible] awaits her [illegible] your partner begs a thousand [illegible] of his absence. With the best will in [illegible], he cannot have the pleasure of dancing with you, for his leg has been shot away and amputated above the knee."

THE HUNGARIAN HUSSAR.

All who have read Max Schleinger's admirable narrative of the *War on Hungary*, will assuredly remember his account of the Hungarian hussar, "the embodiment of Magyarism, born and reared upon the heath," loving his country before all things, and, next to his country, his horse. "There are no soldiers in the Austrian army," says Schleinger, "who can compare with him in chivalrous daring, dexterity, precision in manœuvres, strict subordination, cleanliness and fidelity." Mr. Sajó loves to exalt the virtues, and exemplify the eccentricities, of this fine race of cavalry soldiers. In several of his tales he introduces the heroic hussar, cheerfully suffering and sacrificing himself for Hungary's good and the honor of his corps. The opening scene of *The Chapel at Tarczal* is an admirable sketch of one of these veterans, thoroughly pervaded of the immeasurable superiority of the Magyar over all other men, and of the hussar over every other soldier.

The Austrians had won the battle; the Hungarians had lost it. The Austrian General was taking his ease in his quarters, with his staff around him; an officer entered, and reported the capture of a hussar.

"Bring him in," said the General, who was in excellent humor. He himself wore the uniform of the hussar regiment he had formerly commanded, and had unbuckled his sabre and made himself comfortable; whilst his officers stood around buttoned to the chin, and strictly according to regulation.

The hussar entered—a bare-headed veteran with gray mustaches. His face was still black with the smoke of Schwechat's battle; his stiffly-waxed mustaches stuck out fiercely right and left. He glanced gloomily around him, evidently ill-pleased with his company, until his eye fell upon the General. Then a gleam came over his features, like the sun breaking through a cloud, and he was near shouting for joy. The General laughed, and clapped his hands together. He recognised old Miska, his former orderly, who had served him for five years in Szolcsoki.

"Do you know me again, old man?" said he, good-humoredly.

"At your service, Colonel," replied the hussar, raising his hand to his brow, as though his schako were still on his head.

"General, not Colonel," interposed one of the officers.

Silently and contemptuously the hussar measured the speaker with his eyes, wondering that an infantry-man, Captain though he might be, dared intrude upon the conversation of hussars.

"So you have let yourself be taken prisoner, Miska?" said the General, willing to tease his old servant.

"What could I do, Colonel? There were so many against me. I got into a crowd of them."

"You knocked over a few, I dare say."

"I did not count them, but wounded remained upon the ground."

"Well, Miska. Let them give you a dram, and then go to my grooms; if an idle noddle with you, give him as good as he brings."

The hussar thanked his former Colonel, but remained in small heals to leave the room. The General noticed him no farther, but turned again to his officers and resumed the discussion of his plan of campaign. Suddenly he felt a pull at his pelisse, and turning, beheld Miska, who had stolen quietly behind him. With an unintelligible gesture, and a countenance of extraordinary mystery, the hussar pointed to something.

"Colonel! Colonel!" he whispered, redoubling the vagueness of his gesticulations. The General had no notion of his meaning. "Colonel, reach me yonder sabre from the corner."

"What the—! do you want with it?"

"Only give it here! In two minutes there shall not be a German in the room."

Miska thought his Colonel was a prisoner.

The General burst into a hearty laugh, and told his officers of the hussar's kind intentions towards them. The laughter became general. The officers crowded round the old soldier, clapped him on the shoulder, and made much of him.

"Well, Miska, you will take service with us, eh?" said the General, curious to hear his answer.

"There are no hussar regiments here!" replied the old soldier, twisting his mustaches.

"What matter? You shall be a cuirassier. We'll make a corporal of you."

"Many thanks. Can't stand it. Should have been sergeant long ago, if I could exist."

"What do you think of doing then? Eat your pension in idleness?"

"Not so—by your honor's favor—but make a run for it."

The honest answer pleased the General. The hussar saw that it did.

"A whole regiment of those gaiter-legged fellows could not keep me," he added.

One of the officers asked him angrily why he wished to go back. Those were mistakes, if any, who expected a rude answer from the hussar.

"Yonder is my regiment," he replied, again twirling his mustache. "A true soldier bides by his colors."

To this nothing could be objected.

"Well, Miska, that you may not desert from us, I let you go free."

"Thanks, Colonel." Once more the hand was raised to the schako's place.

"You can go."

The hussar lingered, rubbed his nose, and frowned.

"Colonel—you surely do not intend me to pass through the whole camp in hussar uniform, and on foot. I should die of shame. Let them give me back my horse."

"Your horse? That is the Emperor's property, my son."

"I crave your pardon, Colonel! I reared the horse myself from a colt. I have ridden it for ten years, and it comes at my whistle. By every right it belongs to me. I would rather a bullet hit me than lose the good brute."

"Well, take it."

Even now the hussar did not seem satisfied.

"Colonel! can I go back to my regiment in this scandalous manner? without my sabre? I shall have to run the gauntlet; they will think I have sold it for drink."

"It shall be restored to you." The General made sign to his orderly; the hussar saluted, and turned to depart. But at the door he once more paused, and gazed pathetically at his former chief.

"Colonel!" he said, in the most insinuating tone he could command.

"Well?"

"Colonel—come over to us!"

And with a bound he was out of the room, feeling well enough that he had said something extraordinarily stupid, but which he could not help saying though it had cost him his head.

When horse and sabre were restored to him, one of the General's grooms, a mischievous fellow, trod on the hussar's spur, breaking the towel, and then sprang aside laughing.

The old hussar shook his clenched fist menacingly.

"Wait a little, Italian!" he cried, "I will find you yet." Then saluting the General's window with his sabre, he galloped away.

It was thought that a tear glistened in the General's eye, as he turned to his staff, and said—

"Such soldiers should we have!"

Such were the soldiers with whom Gorgey drove before him the best Generals of Austria; with whom he triumphed in that brilliant conflict, of fourteen days' duration, which terminated in the capture of Pesth, the relief of Komorn, and the complete retreat of the Imperialists. These were the men who rode up to the very mouths of the Austrian cannon at Isazeg, and who followed, in twenty conflicts, the well known war-cry of the gigantic Serb, Damjanics. Of this last-named general (of whom Schleisinger has given many interesting details,) we find an interesting and authentic anecdote in Sajó's vigorous military sketch, entitled *The Two Roads*.

Damjanics and his troops encamped in the night at two leagues from Szolnok. In order of battle, and without watch-fires, they there awaited the signal to advance. The signal was the sound of cannon, fired beyond the Theiss.

The Hungarian General had already fought many battles, won many victories, taken many standards. When he began a battle, he placed himself in front of his army, looked out where the fire was strongest, shouted "Mindszent! follow me!" and rushed forward like this way, trembling all before him. He [illegible] knew that, to be a leader of men, he must be [illegible] enough to win battles, and leave behind him permanent evidence of his existence, that he might be an inspiration to future generations; then, one must [illegible] inches, leave piece-meal behind him, lest, to be [illegible] to future generations; then, one must [illegible] inches, leave piece-meal behind him, lest, to be [illegible] to future generations; then, one must [illegible] to pass, when he marched away and [illegible] that he addressed to the health of the province, a proclamation which has been celebrated. It was word for word as follows:—

"Ye dogs!

"I depart. But I shall come back again.

"If in the interval you dare to sit, I will extirpate you from the face of the earth; and then, that the seed of the Serbs may be extinct, I, the last of them, will shoot myself."

The success of this first attempt so encouraged the General, that, after much persuasion, he gave a solemn promise to make a speech to his army when next they went into action.

On the eve of the battle, Damjanics felt his spirits extraordinarily low.

"Strange," thought he to himself, "never yet have I trembled at the approach of a fight, but now I feel as if I had no stomach for it." And he sought within himself the cause of this unaccustomed mood, but all in vain.

Presently, however, one of the staff-officers came to remind him that, before the next day's battle, they expected to hear the speech he had promised them.

"By—! take it!" cried the General. "*That* was what made me shake in my boots. But never fear, it shall be done—I will venture it—the speech you shall have."

He had drawn out his plan of battle in a quarter of an hour. But morning dawned whilst he was still hammering at his speech.

The troops stood in order of battle. Damjanics rode along the front of the line. Everybody knew he was to make a speech, and what a crowd took it was to him.

Before the colors of the ninth battalion he halted, raised his hat and spoke:

"Comrades!"

At this instant the artillery beyond the Theiss commenced its first discharge. The General's face glowed, he forgot phrases and oratory, tore his sabre from the waistband, pressed his schako down upon his brow, and—

"Yonder is the foe—follow me!" he shouted, in a voice of thunder. A tremendous hurrah was his army's reply, as they followed their leader, with the speed and impetuosity of a torrent, to the familiar encounter of the Austrian cannon.

"Why is it," said Damjanics, as he limped up to the gallows, after seeing seven of his brave comrades executed before his eyes, on the morning of the fatal sixth of October, 1849—"why is it that I, who have ever been foremost in the fight, must here be the last?" That was no night-mare to the dying man. "Shall I, Damjanics," says Schleisinger, "after Gorgey, belonge the glory of all the battles from Hatvan to Komorn. From the commencement of the movement, he was the boldest champion of the national cause." And whatever his staff and his Austrian executioners may have argued from his rhetorical incapacity and his ignominious death, neither assuredly, will prevent his name's generation on posterity's list of patriot-heroes, even though he should never obtain the monument which it has been predicted that Hungary will one day erect to him, upon the spot where he mounted the scaffold.

THE MERRY LIEUTENANT.

From the Memoirs of a Quarter-Master.

I never saw such a man as my Lieutenant. It is not because he was my Lieutenant that I say so, but a merrier fellow was not to be found in the army. Were I a poet or a scholar, I would make a fine romance out of his adventures; but I unfortunately lack the learning. I must be content to set down a few odd incidents of our joyous camp-life, just as they occur to my memory. It gives me pleasure to recall these anecdotes of my late master, who was Lieutenant in the volunteers. Those who knew him will not have forgotten how gay a master he was with women, and how brave a soldier in war.

They transferred us to a battalion that lay in Siebenbürgen, and which was not yet completely equipped. Our principal wants were muskets and cartouch-boxes. Nobody had a great coat, and, in another respect, the battalion was quite uniform, for every one went barefoot. My Lieutenant often complained to the Captain, who had been a Bohemian forester, and afterwards a coffee-roaster in Pesth, but who, when his daughter's husband was promoted to be a Major of our battalion, was by him appointed Captain—to him, I say, the Lieutenant repeatedly complained that the finest soldiers were frozen, and should at least be supplied with great-coats. But all in vain; the superior officers gainsaid the money will there by Government for the equipment of the troops; and all my Lieutenant could obtain from the staff-quartermaster was a few-and which opinion, he said, had addressed to his colleague, who they complained in Egypt of bad clothing—"Are do pain of da fer on pend after a Chinee."

The Lieutenant made me write these words on our bonbred and fifty small slips of paper, pinned them upon his men's shoulders, and said—"There, my lads, are your great-coats." Boots were all that was now wanting. One fine morning we received a hundred and fifty bran-new—thanking heaven!

"*Eineen* nose," said the Lieutenant. "'Tis good instead of boots, they used on blacking." And next day, when the little gray General passed a review, our company marched past with their bare feet blackened and polished, with spongy dung in stalk upon their heels. The General rode up to the first, and then expostulated the Major. The Major laughed too, and decided like Captain. Finally, the Captain abused my Lieutenant, who abused him in return; but, as the one understood no Hungarian, and the other no German, the dispute led to nothing.

At last we got ourselves shod, by gloriously ransacking a Wallachian village, and thrusting our feet into the red boots the women had left behind them. Thenceforward our company was known everywhere as "the regiment of Red Boots."

In our first engagement we had not much to do. The enemy fired at us from a distance, while we stood still and looked at them. Some of the recruits bobbed their heads aside when they saw the shot coming through the air.—"Don't shake your head, my man," the Lieutenant would say; "you might chance to knock it against a cannon-ball." In the second action we took a gun from the enemy. It came up very near us and unlimbered; but, before it had time to fire a shot, my Lieutenant made the soldiers believe it was one of our own guns; that the enemy were about to capture it; and could we suffer this? We could not suffer it, and rushed on: a few shots met us; but before we well knew what we did, the gun was in our power.—The whole was over in less time than I take to tell it.

From that day forward nobody made fun of the Red Boots, and soon we were supplied with muskets. Many of these were hardly fit to fire with; but bayonet and butt were always there, wherewith to thrust and strike.

* * * * * * *

It was in the dog-days. For three months we had received no pay. At last, to silence my Lieutenant's terrible expostulations, they sent us money—fifteen notes of a hundred florins each.

The salaries of Government officials were paid in fifteen kreuzer pieces; the money we soldiers wanted, for our daily bread, was sent in hundred-florin notes. Of course, nothing could be easier, in the Wallach hamlets in which we were cantoned, than to get small change for fifteen hundred-florin notes!

Whilst my Lieutenant was grumbling over this, and puzzling his head how to divide the few large notes into many small ones, a courier arrived and brought him a letter.

The Lieutenant read the letter and laughed out loud. Then he ordered a parade. He was the only officer present. Two Captains and a Major were constantly rambling about, and seldom saw their battalion, but left everything to my Lieutenant. So he ordered the drums to beat for muster; and when the men were assembled, he informed them that their pay had come just in the nick of time. Then he produced the fifteen hundred florins* and a pair of scissors, made the soldiers file past, and cut off a slip of the notes for each one of them. It was the only way to divide them.

This done, he came singing and whistling into his quarters, laughed and cut jokes, played a thousand pranks, and at last called to me and asked if I had a dry cloth at hand, to wipe up something.

I answered that I had.

"Go and fetch it, then." And he ordered me to laugh and jest, and seemed in most good humor. "Make haste," he [illegible] me, as I hurried to fetch the [illegible] sure he was going to play [illegible] he looked so sly and [illegible] the order. I heard the re[illegible] next room. Towel in [illegible] door. The room was full [illegible] of a frost [illegible] "What to wipe up?" I asked.

"Blood!" said the Lieutenant, who lay [illegible] ground. The warm heart's-blood [illegible] from a wound in his breast; in his hand held a pistol and the letter he had that morning received.

The letter announced the catastrophe of Vilagos (Gorgey's Treason). In two minutes he was dead.

Thus did my Lieutenant make a fool of me at last.

The various memoirs of the Hungarian war record more than one instance of self-destruction and insanity amongst the enthusiastic defenders of the Magyar cause, consequent upon Gorgey's shameful surrender, and the final downfall of their cherished hopes. As far as the suicide goes, therefore, there is nothing improbable in the conduct of the eccentric Lieutenant.

* The notes issued from Kossuth's bank-note press were, of course, worthless when the revolution was suppressed.

Miscellaneous.

THE HONEY BEE.

A lecture on the Honey Bee was recently delivered before the Smithonian Institute at Washington, by Dr. Morris. A correspondent of the National Intelligencer, is nothing the lecture, makes some interesting statements, and furnishes some practical hints. Bees, said the lecturer, are villanous thieves. They enter the hive and steal away the honey. Bees never pay complimentary visits. A bee never lights upon the platform of a hive not its own with honest intentions; so the careful observer will instantly detect a stranger bee. It is well known as an enemy by the guard at the entrance to the hive; for a guard, day and night, is stationed there of sufficient force to repel intruders, and will certainly do it if this entrance in size is proportioned, to built in a church. They would such attention to this subject will prevent robberies among bees. Where, however, the entrance is of an unnecessary and unreasonable size, measures will effect an entrance in spite of the guard, and then a terrible confusion or subjugation ensues. It is fierce and dreadful. Reinforcements on both sides are rapid, and many bees are slain. The battle is soon determined, nearly always in favor of the assailants. The strong are most likely to attack the weak. The victors take possession of the hive, and the conquerors assist to carry away their own honey, and go with it. Such is the war of bees. The following is the best way to manage robbing bees.—Close the door of the hive five minutes; in this time the robbers will have obtained their booty, and will be pressing to the door. Open it, and let them out, and as soon as the hive is emptied of these intruders, close again as nearly as that no a single bee can pass at a time. With no small a space the robbers will soon give over, and leave the hive in peace. When robbers are thus suddenly checked, they often attack in adjacent hive with a rush which the guard cannot resist. This should be looked to, and it will be prudent, at the time of closing the entrance in the hive first attacked, also greatly to reduce the width of the entrance to all the hives standing near, until this danger is past. These directions are given on the presumption that the hive is ventilated, as every hive should be. Without ventilation, in a hot day, five minutes exclusion of the atmospheric air may be dangerous or fatal. In this case caution must be used, but upon the same principle the intelligent aquarian can still succeed.

Good Manners.—There is nothing settled in manners, but the love of behaviour yield to the energy of the individual. The modern at her first ball, the countryman at a city dinner, believes that there is a ritual, according to which every act and compliment must be performed, or the failing party must be cast out of this presence. Later, they learn that good sense and character make their own forms every moment, and speak or abstain, take wine or refuse it, stay or go, sit in a chair or sprawl with children on the floor, or stand on their head, or what else suiteth, in a free and aboriginal way—and "an strong will is always in fashion, and will be unexceptionable. All that fashion demands is composure and self-control. A circle of men perfectly well bred would be a company of sensible persons, in which everyone's native manners and character appeared. If the fashionist have not this quality, he is nothing. We see his defect of self-reliance, that he excuses in a man many sins, if he will show us a complete satisfaction in his position, which asks to leave to be of mine, or any man's good opinion. But are deference to some eminent man or woman of the world, forfeits all privilege of nobility. He is an underling. I have nothing to do with him; I will speak with his master.

One may be too practical and too precise. He must leave the circumstance of business at the door, when he comes into the palace of beauty. Society loves creole nature, and despises, languishing manners, so that they cover sense, grace and good will, the air of drowsy strength, which disarms criticism; perhaps, because such a person seems to reserve himself for the best of the game, and not spend himself on surfaces, as ignoring eye, which does not see the spots, stains, shifts and inconvenences that cloud the time and smother the voice of the minister.—*Emerson.*

True Honesty.—Some years ago, two aged men, near Marmaduke, traded, or according to Virginia phrase, swapped horses, on this condition—that on that day week, the one who thought he had the best of the bargain, should pay to the other two bushels of wheat. The bargain, and as luck would have it, they met about half way between their respective homes.

"It were not thus going," said one.

"To thy home with the wheat," answered the other. "And whither art thou going?"

"Truly," replied the first, "I was taking the wheat to thy house."

Each pleased with his bargain, had thought the other jolly due to his neighbor, and was going to pay it.

Soldiers and Sailors.—When I was in Malta, in 1805, says Coleridge, there happened a drunken squabble on the road from Valette to St. Antonio, between a party of soldiers and another of sailors. They were brought before me the next morning, and the great effect which their intoxication had produced on their memory, and the little or no effect on their courage in giving evidence, may be seen by the following specimen. The soldiers swore that the sailors were the first aggressors, and had assaulted them with the following words:

"——your eyes! who steps the line of march there?"

The sailors with equal vehemence and unanimity averred, that the soldiers were the first aggressors, and had bound in no form, calling out—

"Heave to, you lubbers! or we'll run you down!"

Each party putting its own peculiar phrases in the others' mouths.

Power of an Ordinance.—Our city fathers passed a law last spring, making it penal for steamboats to land cholera patients here, except they were shipped for this point. Some time since a friend was in the back country, when a rustic acquaintance of his, who did not take the papers, and consequently did not know every thing, asked him,

"How is the cholera now in Brunswick?"

"Our friend told him there had been none since last year.

"Why," said he, in surprise, "I heard the town was chock full."

"Oh, yes," was the funny answer, "so it was last year. Since then they have passed an ordinance against its coming there."—"They

"That's right," said the country gentleman, "I ought to keep it away!"

The joke was told, and the joke was good.

A Hint.—The following by William IV., with great glee, as he was riding in the then Duke of Clarence's coach, when I was overtaken by a poor old widow, who, with a young child in her arms. "Nice pony, that pony of your's, old gentleman," said he. "Pretty good, is my reply. "Nice's a good one, too," said he, "and I'll trot you to Hampton-wick for a pot o' beer." I declined the match, and the butcher's boy, as he struck his single spur in his horse's side, exclaimed, with a look of contempt, "I thought you were only a muff."

Sharp Enough.—An odd sort of genius having stopped in a mill, was looking with apparent astonishment at the rotary movements of machinery, when the miller, thinking to quiz him, asked him if he had heard the news.

"Not as I knows on," says Jonathan, "what is it?"

"Why," replied the miller, "they say the devil's dead."

"By jings," he exclaimed, "is he,—who then tends the mill?"

Hereditary.—"Susan," said an Irish gentleman to his servant, "what are the bells ringing for?"

"In honor of the Duke of York's birth-day."

"Be easy, my jewel," rejoined Pat, "none of your tricks upon travellers; and 'twas the Prince Regent's on Tuesday, and how can it be his brother's four days after, unless indade, they are twins?"

HOW TO BUILD A MEETING HOUSE.

"Did I ever tell you," said my friend, in his usual grave and significant tone, "how I built a church in three days?"

"Built a church in three days," said we, in utter astonishment; "how could that be?"

"Aye, more than that," continued our energetic friend; "in three days from the time the axe was laid at the root of the timbers of which it was erected, a neat church was completed, and I had the pleasure of hearing an excellent sermon delivered in it."

"Certainly that was doing things with a dispatch unknown in church building; but you excite our curiosity, and we should like to know more about it; so you may as well tell us the whole story at once."

"But you editors are so apt to print everything you hear, that I am almost afraid to trust you, lest I find myself out in the Protestant, as was the friend who related to you the particulars of your story about '*Black Jerry, or the Prowling Negro*.'"

"Well, we promise not to tell on you, however much we may say about the house you built and the manner of building it. Besides, it might teach others something; and that, you know, would be sufficient excuse for an editor to tell his readers a good story."

"And you won't publish my name with it, and set enthusiastic and good humored companion, drawing his fingers and thumb over his face, in a manner peculiar his own.

"Certainly not—that shall be kept from our readers, as well as your name."

"Well, then, let me tell you, that when I travelled ——— circuit, in the West, I had occasion sometimes to visit a neighborhood where there resided several Methodists, in tolerable good circumstances; but far too feeble, as they thought, to build a church for themselves, and contribute five or ten dollars a year toward the support of the sister churches in the neighborhood, where they generally attended, though occasionally they would get over to preaching at one of my stations appointed for them. They supposed themselves quite too weak to think of building a house of worship for themselves, and therefore felt it to be their duty to help, as they were able, their neighbors of other denominations.

"That was liberal and proper."

"Oh, yes, certainly it was; but, dining one day with the most wealthy and prominent farmer among them, I said to him after dinner, 'Wouldn't it be a fine thing if you could have a neat house of worship built somewhere in this vicinity for our people?'

"'That it would,' said he, 'but I am afraid I can't be done for years yet.'

"'Wouldn't you be willing, brother, to give us an acre of ground where the cross roads only intersect?' It is so central, that we are not improving that part of your property.'

"'Most cheerfully—but what can you do with ground unless you have money to put up the building?'

"'Let us wait over and look at it, brother. Maybe something can be done.'

"So over we walked, and very soon reached the spot. It was a lovely site. Acres of large wood, level stretched beyond it, and it lay directly accessible to two of the most thoroughly travelled roads in the whole country.

"'Now, brother,' said I, 'would it be asking too much of you to beg as much timber from these fine oaks as would put up a log building, provided we have all other expenses to pay?'

"'You shall have as much as you need.'

"And couldn't you and the rest of the neighbors furnish a few hams, a few bushels of potatoes, and a few loaves of bread, for three successive days, to help to feed the workmen that I shall have to employ?'

The old farmer smiled, and said it could be done, and it should be done; but he thought I would find it difficult to get the house up, nevertheless.

"'Don't fear me, brother,' said I. 'Let me see, next Wednesday the work shall be commenced. I will have one hundred and forty men here on that day, and there will be a good house completed by Saturday morning, and we will hold a meeting in it over the Sabbath.'

The old farmer looked very incredulous, smiled at me, and said,

"'I hope your prediction may be realized.'

On that afternoon I delivered a temperance lecture ten miles from that place, and at night preached. There was an excellent feeling in the congregation. At the close of the meeting I said—

"Brethren, I want you to help me build a house for God, at such a place—I don't ask you for money, but I want your time for three days, with your wagons, and axes, and implements of carpentry. How many of you will agree to meet me on the spot on next Wednesday morning, and give three days work to the Lord."

Up rose one, two, three—presently thirty strong men were upon their feet.

"Now," said I, turning to the sisters, "we will not exclude you from this good work. Come along with your husbands and brothers, and fetch a few pies and bread, and a ham or two, for the sustenance of these laborers, and God will bless you."

The thing having taken so well, the first demonstration having resulted so successfully, I repeated it at the next appointment, and so on for some thirty miles round the country, until one hundred and ninety men were pledged, if practicable, to be on the ground at the appointed time; which I felt satisfied would yield the requisite number, making all allowance for unavoidable detentions.

On Tuesday evening I rode up to the old farmer's. It had rained slightly all day, and only about twenty tabacons had as yet come up; but I felt confident they would be with us on the morrow.

The evening was pleasantly spent, and before retiring I said—

"Brethren, let us pray that our Heavenly Father may prosper us in this undertaking for His glory—that He may send such a rain this night as will unfit the ground for the share of the plough for three days, so that our brethren may not be tempted to tarry at home—that to-morrow He may give us fair weather and plenty of hands, and that the whole work may be accomplished speedily, and without accident to any one."

After prayer, in which all joined heartily, we retired to rest.

That night such a shower fell, and such thunders roared, as deluged and shook the adjacent hills as they had seldom been shaken. But the morning dawned beautifully. Everything seemed renovated by the storm. At six o'clock we were out, and by nine reinforcement after reinforcement had arrived, until our complement of men was made up. And such piles of pies and loaves, and poultry, as sisters brought through them, had seldom been provided in this vicinity; and they gave us most to the praise of an agreeable and [illegible] multitude of laborers.

[illegible] a singing and My first business, after prayer, and distribution was to classify our. So many to fell bole the department with the logs; so many to hew the trees; so many to prepare the floors, put up the sides, so many to prepare the pulpit; so many to prepare so many to do, &c. Among them were several for the carpenters, and one or two good readers. The first stroke of the axe I made myself to make, for I took my turn with the fellows. And if ever I saw a magnificent sight in my life, it was when, with thundering, crashing sound, there came to the earth, one after another, those huge monarchs of the forest, before the steady stroke of these stalwart axe-men.

"And was your house completed?"

"Aye, sir, Friday night's sunset kissed its summit. Benches were brought from neighboring houses, and on Saturday morning we held meeting there. A brother minister who had come over to look at us, having heard of the project, preached the first sermon to a large and attentive congregation, from 'For he loved our nation, and built us a synagogue.'—Luke vii. 5. Better than all, a gracious revival soon broke out in the log tenement; and in two or three years after, it was succeeded by an handsome country church as may be any where found in that section of country."

And our friend again drew his hand across his face, in his own peculiar and significant manner, as if the very recollection of his success in the undertaking filled him with delight.—*Methodist Protestant.*

THE FOOLISH QUARREL.

FROM CHRIST'S HYMN TO THE ROSE—SCRAP BOOK.

"Hush, Jeanie, hush! quite certain
That the coffee was not strong,
Own your error—I forgive you—
Why so stubborn in the wrong?"

"You'll forgive me! Sir, I hate you!
You have used me like a chattel,
Have my senses vanished to pride me?
Do you think I am a girl?"

"Oh, no! you're a girl no longer,
But a woman, formed to please,
And it's time you should abandon
Childish follies such as these."

"Oh, I hate you!—But why cry too?
If I'm old, you're older still;
I'll no longer be your victim,
And the creature of your will."

"But, Jeanie, why this pother?
It might happen I was wrong;
But, if common sense inspire me,
I'll confess it—sure—strange."

"Common sense! You never had it!
Oh, that ever I was born
To be wedded to a monster
Who repays my love with scorn!"

"Well, Jeanie, we'll not quarrel—
What's the use of letter sense?
But I'm sorry I was married
I was used to take a nap."

"Mad indeed! You glad you married!
Not a word more, I'm open,
I'll be tied to you no longer
I am weary of the chain."

"Hush, Jeanie! Shall the neighbors
Hear our angry, every word?
Can you not have done with folly?
Even the coffee was not strong."

"Oh, you good one! pod exclaiming,
Jeeling with my woman's heart;
But I know—you need not deny it—
Villain—Monster! Let us part!"

Long this foolish quarrel lasted,
Till Jeanie, half afraid
That her empire was in peril,
Summoned Jeanie's faithful aid.

Summoned Jeanie, in copious tearcats,
Tears, and sobs, and piteous sighs,
Well she knew the art of charmer,
The artillery of the eyes.

And it flanked as she imagined—
Beautiful in great was she—
Frightful to best advantage
And a tender heart had he.

Kneeling at her side he sorrow's tear—
"I love Jeanie, I was wrong,
Never more be troubled—promise
Me—for—ever—my—Jeanie."

A Dry Parson and Bad Beasts.—As Alexander Alexander—the well-known divine—was walking in a very hard and hail rain among men of all sorts and sizes, trades, grades and professions. How very few are the evils of society which are so regarded by all, how much of every thing, especially of opinion, takes its color from the state of the observer, as rain and hail, or a fine and pleasant day. But we don't intend to write an essay, but merely to tell an anecdote to illustrate what we have been saying—an anecdote which has at least the merit of authenticity, and a small spice of drollery. Several years ago two Englishmen, members of the "Society of Independents," as the congregationalists are termed in England, came as delegates from the home churches to the churches in the United States, for the purpose of inquiry respecting the religious condition of the new world. Both of them were persons eminent for learning and piety, but neither of them had ever known anything of temperance organizations or, and, though of good personal habits, they were by no means "teetallers"—being, in short, very much in this respect like the generality of their countrymen. One of them stopped some weeks with a distinguished Presbyterian divine in Philadelphia, a strong total abstinence man, and a violent hater of grog in all its forms. The Englishman, getting cold and wet, and being fond of his toddy, and feeling the need of something, went out one day to the nearest gin shop and helped himself. On returning to the house of his friend, he set down his bottle on the table, and his host, seeing what sort of a shop, may I ask—what sort of a house is that about the corner?" "I don't know what house you refer to," said the other. "Why, a sort of six house, you know, just about the corner." "Why sir," said the Philadelphian, looking rather surprised at the question, "why, sir, that's the lowest grog shop in this city!" "Indeed!" said the phlegmatic Englishman, "well, I thought so, from the bad quality of the brandy they keep there." "I am astonished," said the other in unfeigned amazement, "that you should visit a house of that description!" "Well, for that matter, so am I, rather," replied the Englishman, "but, being a stranger in town, you know! I couldn't readily find a better; but, of course, with the blessing I have of these infernal beasts beside, I shall soon go there again, though, to say the truth, the tavern looked well enough to have been a respectable house." The Philadelphian saw at once the man would never understand him; gave a deep sigh—and turned the discourse to other matters.—*Boston Post.*

Peel's First Efforts in Oratory.—Soon after Peel was born, his father, the first baronet, finding himself rising daily in wealth and consequence, and believing that money, in these popular days, would always command a seat in Parliament, determined to bring up his son expressly for the House of Commons. When that son was quite a child, Sir Robert would frequently set him on the table, and say—"Now, Robin, make a speech, and I will give you this cherry." What few words the little fellow produced were applauded, and applause stimulating exertion, produced such effects, that before Robin was ten years old, he could really address the company with some degree of eloquence. As he grew up, his father constantly took him every Sunday into his private room, and made him repeat, as well as he could, the sermon which had been preached. Little progress in effecting this was made, and little was expected at first; but by steady perseverance, the habit of elocution grew powerful, and the sermon was repeated almost verbatim. When, at a very distant day, the Senator undertook to repeat the sermon of the morning, answered his arguments in correct succession, it was little known that the power of so doing was originally acquired in Drayton church.—*Memoirs, by the Sons of Peel.*

Railroads and Horses.—It is found by a recent census, that in consequence of the introduction of railroads, the number of horses in England has been reduced from 1,600,000 to 800,000. It is computed that it requires as much food to support one horse as it does to subsist eight men. Consequently, it would appear that the 800,000 horses displaced by railroad make room for an additional population of 5,600,000.

Democratic Coolness and Cruelty.—Among the names connected with the history of Henry VIII.'s tyranny, few are more remarkable than that of Sir William Kingston. He attended out those to whom the dying Wolsey had the faith those "last sighs" which "cry Boleyn's jailer, of Kings," and he was present on Execution. There is a sad, unsentimental, but, withal, writer, which illustrates story told of him, his hardness of heart, and traces his nonchalant nature in a worse light which exhibits even the history of Carrier and than is afforded supporters. "One Bowyer, his ancestor, in Cornwall," says our author, "Mayor of been amongst the rebels, not without enforced; to him the Provost Kingston it word he would come and dine with him, for whom the Mayor made great provision. A little before dinner, the Provost took the Mayor aside, and whispered, in his ear, that an execution must that day be done in the town, and therefore he must set up two gallows: the Mayor did so.—After dinner Sir William Kingston thanked him for his entertainment, and then desired him to bring him to the gallows. He then asked whether they were strong enough. 'I warrant them,' said the Mayor. 'Then,' rejoined Sir William, 'set you upon them.' 'I!' said the Mayor; 'you mean not as you speak.' 'Nay, sir, you must die, for you have been a busy rebel.'" Nor let nor the devil could be cooler than this. There were seventy thousand persons hanged in England during Henry VIII.'s reign, which was truly the hangman's golden age.

☞ An honest Hibernian had come far to see Niagara; and, while he gazed upon it, a friend asked him if it was not the most wonderful thing he had ever seen; to which he replied—"Niver a bit, man—niver a bit. Sure, it's no wonder at all that the wather should fall down there, for I'd like to know what could hinther it; but it's mighty quare, though, I'm thinking, how the paintcher it ever got up!"

Agricultural.

FARM MANURES, AND THEIR MANAGEMENT.

We copy the following chapter on "*manures from domestic animals, and their preservation,*" from the recent work of Professor Norton, entitled "*Elements of Scientific Agriculture.*"

The manure of various domestic animals is, in this country, most commonly employed as a fertilizer, all other manures being used in comparatively small quantities; and yet even these are seldom preserved and applied so carefully as they might or ought to be.

The principal materials are those of the ox, the cow, the hog, the horse, and the sheep. Of these, that of the horse is most valuable in its fresh state; it contains much nitrogen, but is very liable to loss by fermentation. That of the hog comes next. That of the cow is placed at the bottom of the list. This is because the crushing substances of her food go principally to the formation of milk, the manure being thereby rendered poorer.

The manure of all these animals is far richer than the food given them, because it contains much more nitrogen. This is for the reason that a large part of the carbon and oxygen of the food are consumed in the lungs and blood generally, for the purpose of keeping up the heat of the body. They are given off from the lungs, and also by perspiration and evaporation through the pores of the skin, in the form of carbon and water.

From animals fed upon rich food, the manure is much more powerful than when it is poor. In England, for instance, where they fatten cattle largely on oil-cake, it is calculated that the increased value of the manure repays all of the outlay. This is the reason why human urine is better than manure from any of the animals mentioned above, the food of man being rich and various.

All these kinds of manures should be carefully collected and preserved, both as to their liquid and solid parts. The liquid part, or urine, is par[illegible]arily rich in the phosphates and potassa[illegible]. The solid part is, in many farmers, permitted, in a great degree, to run away, or evaporate. Some farm-yards are contrived so as to throw the water off entirely; others convey it through a small ditch upon the nearest field. The liquid manure which might have fertilized several acres in the course of the season, is thus concentrated upon one small spot, and the consequence is a vegetation so rank as to be of very little use. Spots of
